

SEGA PC DISC – NOTES ON USE

HEALTH ISSUES

Use this software in a well-lit room, staying a good distance away from the monitor or TV screen to not overtax your eyes. Take breaks of 10 to 20 minutes every hour, and do not play when you are tired or short on sleep. Prolonged use or playing too close to the monitor or television screen may cause a decline in visual acuity.

In rare instances, stimulation from strong light or flashing when staring at a monitor or television screen can cause temporary muscular convulsions or loss of consciousness for some people. If you experience any of these symptoms, consult a doctor before playing this game. If you experience any dizziness, nausea, or motion-sickness while playing this game, stop the game immediately. Consult a doctor when any discomfort continues.

PRODUCT CARE

Handle the game discs with care to prevent scratches or dirt on either side of the discs. Do not bend the discs or enlarge their center holes.

Clean the discs with a soft cloth, such as a lens cleaning cloth. Wipe lightly, moving in a radial pattern outward from the center hole towards the edge. Never clean the discs with paint thinner, benzene, or other harsh chemicals.

Do not write or attach labels to either side of the discs.

Store the discs in their original case after playing. Do not store the discs in a hot or humid location.

The Medieval II game discs contain software for use on a personal computer. Please do not play the discs on an ordinary CD player, as this may damage the headphones or speakers.

* Also read the manual of your personal computer.

* The game discs may not be used for rental business.

* Unauthorized copying of this manual is prohibited.

* Unauthorized copying and reverse engineering of this software is prohibited.

HAIL COMMANDER! WELCOME TO MEDIEVAL II: TOTAL WAR!

Medieval II: Total War is a truly epic strategy game that puts you in charge of one of the powers of the Middle Ages, allowing you to lead your soldiers on the field of battle, as well as plan the expansion of your empire across the Old World. Unlike most other strategy games, **Total War** games separate the action of battle from managing your empire's affairs. These are the battle and campaign sides of the game respectively.

Medieval II: Total War offers the complete warfare experience, with realistic battle mechanics and historical accuracy. You will need to master the same tactics that actual field commanders used in real combat situations, and you will do it with exactly the same sorts of troops, armor and weapons that took to the field of battle in the Middle Ages. This is the time of great leaders such as Richard the Lionheart and Saladin. This is the time of noble knights, mighty castles, acts of chivalry, religious crusades and deadly treachery. This is your time to conquer the world!

INSTALLATION

Requirements

Please make sure your computer system uses either Windows XP or Windows 2000.

Medieval II: Total War is not compatible with earlier versions of Windows, or non-Windows operating systems. **Medieval II: Total War** also requires the latest DirectX 9.0c compatible drivers for your DVD drive, sound card and video card to operate at its best. If you have any problems running the program, older sound or video drivers are the most likely cause.

How to Install

- Before installing, close all other applications.
- Insert **Medieval II: Total War** DVD 1 into your DVD drive. If you have Autoplay enabled, the title screen will display shortly after inserting the DVD into your drive. If Autoplay is not enabled, simply *double-click* on My Computer and then *double-click* on your DVD Drive to launch the game installer. On the title screen *click* the Install button to begin the installation process and then follow the on-screen instructions.
- After **Medieval II: Total War** is installed, your computer will install Microsoft DirectX 9.0c drivers (if you do not already have them). When DirectX installation is complete, you may need to restart your computer for the new drivers to take effect. For more information on DirectX 9.0c, see the relevant Help file.
- Now you can run **Medieval II: Total War** from the Start menu or by *clicking* Play on the DVD title screen. Please note that the game requires you to have a **Medieval II: Total War** DVD in your DVD Drive at all times in order to play the game.

Installation Key

Your copy of the game comes with an installation code, which should be located inside the case. When you install the game you will need to type in this key. Your installation key is unique and without this key, you will not be able to play the game. Please enter the key exactly as it appears on the case.

Keep your installation key safe and private - do not give it to anyone else as this may impair your ability to play multiplayer games.

STARTING MEDIEVAL II: TOTAL WAR

The Main Menu

- **Single Player** – This will take you to the **SINGLE PLAYER MENU** from which you can start a Grand Campaign, Custom Battle, Quick Battle or play a Historical Battle.
- **Continue Campaign** – This will automatically load your last saved campaign game/auto-save and allow you to continue your conquest.

- **Multiplayer** – Accesses all of the multiplayer modes available. For detailed instructions on getting started with multiplayer, see the Multiplayer Battles section of this manual.
- **Load Game** – Allows you to load saved campaigns, custom battles and battle replay movies.
- **Options** – Adjusts the options available for Video, Audio and Game Controls.
- **Quit** – Exit **Medieval II: Total War** and return to Windows®.

Any options that you cannot currently access will be “greyed-out” until you can use them. To quickly quit the game hit the **ESC** key on your keyboard.

Single-Player Menu

- **Tutorial** – The recommended way to start playing **Medieval II: Total War**! This will guide you through how to play the game.
- **Grand Campaign** – This begins your epic conquest of the Old World as the ruler of one of the great powers of the Middle Ages.
- **Custom Battle** – Fight the battles you want to fight, the way you want to fight them. Choose the place, the conditions, the rules, the armies and create your dream battle scenarios.
- **Quick Battle** – Instantly teleports you to a battlefield where a pre-assembled army awaits your command. You must adapt your tactics to the troops you have been given to become victorious.
- **Historical Battle** – This gives you a chance to relive the greatest battles of the medieval era. An opportunity to prove that you yourself could have defeated the superior French army at the Battle of Agincourt.

Clicking on the “**Back**” button located in the bottom left corner takes you back to the main menu. This option will be available in many of the menu pages. Alternatively, you can press the **ESC** key on your keyboard.

Multiplayer Menu

- **Online Battles** – With an internet connection in place, you will be able to test your skill against other aspiring strategists across the world using the GameSpy® engine.
- **LAN Battles** – This option will allow you to battle your friends across a Local Area Network connection. All users will need a copy of **Medieval II: Total War** on their computer.
- **Player Name** – This is your game name/call-sign that is displayed within LAN and Online battles.
- **Email Address** – This acts as your register to play online and across a LAN.
- **Password** – For a secure gaming experience, your password is used to protect your account; this stops other players from using your account online or across a LAN.
- **DO NOT give out your password; it should be kept private!**
- Visit www.totalwar.com – Here you'll find information, hints and tips for your game, downloads, and links to our user forums.

Load Game Menu

- **Load Campaign** – This will load any saved games that you have made while playing in the Grand Campaign. This will also include your auto-saves that are created at the end of your last turn.
- **Load Custom Battle** – This allows you to load your saved preset custom battles and your last quick battle. You are able to save your settings for custom battles when setting them up in the custom battles menu.
- **Load Battle Replay** – Loading replays will allow you to watch your victories or defeats. While viewing your replay file you are unable to affect units in the battle but you are able to speed up and slow down the battle. This is a great way to learn from your mistakes or

savour your victories.

Saved games can be made throughout different parts of the game. Campaign save games can be created while on the campaign map. Battle replays can be made at the end of each battle. Custom battles have more saving options that will be explained in a later section of this manual.

Options Menu

- **Video Settings** – This contains all your game settings in regards to your graphics and overall look of the game, for advanced visual options click on the “Show Advanced Options” icon under Graphical Quality.
- **Audio Settings** – This contains all your sound settings. Use the sliders to adjust the various sound levels in the game.
- **Keyboard Settings** – This lists all the game shortcut keys for the camera, battles, campaigns and other miscellaneous controls. To save/load your new keys click on the “Load/Save Settings” button. If you want to revert back to the game default keys click on the “Restore Default Settings” button.
- **Game Settings** – Use the sliders to adjust your in-game camera movement speed - left being slower and right faster. This menu also contains an adjustment for your game unit size, which increases or decreases the amount of units your armies have on the battlefield. Another feature allows the user to play with minimal UI to view more of the battlefield.
- **View The Credits** – This will present you with the list of the fine men and women that made this game.

Some “Video” and “Audio” settings will be able to be changed via the in-game options panel. This is accessible by pressing the **ESC** key and choosing the relevant menu option.

HELP, ADVICE & THE TUTORIAL

Learning How to Play

Medieval II: Total War provides a very deep strategy experience with countless options. To ensure that you can focus on ruling your empire rather than reading this manual repeatedly, there are three features to explain how things work:

- The Tutorial
- Your Advisors
- Help Buttons

The Tutorial – “Hands On” Lessons

The first option in the Single Player Menu takes you to the **Medieval II: Total War** Tutorials – The Norman Conquest, a Prologue that comes in two parts. Starting off is the “Battle of Hastings” where you will receive lessons on how to fight battles in **Medieval II: Total War**. Then secondly, “The Norman Conquest,” where you will receive hands-on lessons on how to control your empire in a campaign including two siege tutorials, one for a city and one for a castle.

It is very strongly advised that you play through both parts of the Tutorial before starting a Grand Campaign.

Your Advisors

Like any medieval king or sultan, as the ruler of a vast realm you will have advisors to assist you through your reign in **Medieval II: Total War**. Since there are very different skills to master on the battlefield compared to planning your strategies across the campaign map, you have two different advisors to assist you:

- **Sir Robert** is your trusty battle mentor. He will give you advice on how to use the battle controls and, more importantly, alert you to situations that arise in battle that require your attention. Listening to Sir Robert is a sure step on the path to victory.
- **Lady Gwendolyn** is your voice of wisdom when controlling your faction on the campaign map. She can advise you about settlements, recruitment, your empire, diplomacy, religion

and anything else you deal with in the strategic side of **Medieval II: Total War**.

Receiving Advice

When an advisor has something important to tell you, their portrait will appear on a small panel in the top left corner of the screen. The message will also appear as text in a speech bubble beside their portrait. Sometimes at the end of that speech bubble is a checkbox – *click* on it if you wish to avoid hearing advice on that topic again in future. You can reset all the advice being blocked in the **Game Settings**, by hitting the **ESC** key during the campaign.

 The controls that surround the advisor's portrait are:

 The **magnifying glass button** will show you the location that is relevant to the advice being offered.

 Click on this **button** to have the advisor demonstrate how to carry out an action in the game. They'll take you through a step-by-step process so you can see how a part of the game works.

 This **Advisor Speech & Text button** toggles between offering advice as speech & text, text only, or speech only.

 The X button dismisses an advisor, closing the Advisor Panel. The panel will return when new advice is being brought to your attention.

Advice Preferences

You can adjust the amount of advice you receive before starting a Grand Campaign or during a campaign in the Game Options. You will find these settings when starting a Grand Campaign.

- Turn Advice Off - Stop the advisors from appearing on screen at all. The only exception is when you actually request help or advice.
- Only Vital Info - Your advisors will only give you warnings and vital status updates.
- Get Me Started - Your advisors will give you enough help to play the game, but give you room for your own experimentation.
- Tell Me Everything - Your advisors will provide detailed instructions and explanations of most aspects of the game as you play.

Asking for Advice

The **Settlement Scroll** has an icon of the advisor that you can *click* to receive a construction or recruitment suggestion. If you are unsure of what to recruit or build next in a settlement, you can *click* on this **button** for help. The advice given will be determined by whether the player has selected the **Construction Panel** or the **Recruitment Panel**.

Using Help

 Throughout **Medieval II: Total War** you'll see a "?" button on scrolls and information panels, typically in the top-right corner. Click on this to bring up help information about the relevant part of the game – This help will arrive via your advisor.

CAMPAIGNS

The Grand Campaign

The Grand Campaign is the "main game" of **Medieval II: Total War**, where you not only lead your armies into battle, but also manage an entire empire. These two things are handled quite separately – You take your time planning where to send armies and managing the affairs in your realm. However on the field of battle, you need to react swiftly and decisively to any threats or opportunities.

Your overall goal in the Grand Campaign is to lead your people to become the most dominant empire in the world, seeking to control a huge area of land, and either have control of a certain region or outlive a particular opposing faction. Victory in the Grand

Campaign is a truly epic achievement – they generally take days, or even weeks, to complete.

Starting a Grand Campaign

From the Main Menu, select Single Player, then select Grand Campaign. Before you start playing, you must select a faction. This is also where you decide on any special settings you'd like for this particular campaign. Once you've adjusted the settings for the campaign you are about to play, *click* on the "**Next**" button in the bottom-right corner of the screen to begin!

The campaign settings & options include:

- **Campaign Rules:** Choose between short and long victory conditions. Conditions vary from faction to faction.
- **Advice Level:** Determines amount of advice given in the campaign.
- **Difficulty:** The higher the difficulty the more effective AI-controlled factions are, and the more other factions will take offence to diplomatic transgressions.
- **Battle Difficulty:** The higher the difficulty, the more effective AI controlled opponents are in battle.
- **Manage All Cities:** Selecting this will allow you to manage cities without having a governor in residence.
- **No Battle Time Limit:** Selecting this will remove the time limit from campaign battles.
- **Show CPU Moves:** Selecting this will track the movement of armies and characters visible to the player during the CPU factions' turns.

PLAYING THE GRAND CAMPAIGN

How to Win a Campaign

Your main goal in the Grand Campaign is to expand your empire by conquering regions of land, either near or far. Your secondary goal will be to either take control of a certain settlement or wipe out an opposing faction. That secondary goal will depend upon whether or not you selected to play a long (standard) or short campaign.

Let's look at understanding what's in front of you at the start of the campaign to get you on the road to conquering the world!

The Campaign Map View

The first time you play the Grand Campaign, your campaign advisor Lady Gwendolyn will give you a tour of your lands, and show you some ideal targets to strike at first. After her tour, you will have control of the campaign map view yourself, and this is your basic window to the world in **Medieval II: Total War**.

You will see that the campaign map has all sorts of climates and terrain types over it and that the lands are divided into different regions, marked out by borders. The colors of the borders show you which faction controls the land.

Firstly, these are the following things you will see around the campaign map as you play **Medieval II: Total War**:

- **Settlements.** These appear as either **cities** or **castles** on the map, with a name plate. The amount of filled color on the banner above the settlement indicates the power of the force garrisoned within it.
- **Armies.** These appear as a military figure with a banner above them. The amount of filled color of the banner above the **army** indicates its overall power. **Command stars** beside an army represent the experience of the **General** leading it.
- **Agents.** These include all the non-military character types such as **Spies**, **Assassins**, **Priests**, **Merchants**, **Diplomats** and **Princesses**. Some types of agent are always controlled by the CPU, such as **Heretics**, **Witches** and **Inquisitors**.
- **Resources.** Around the map you will see various trade resources out in the countryside. These show what goods can be exported from the region they are in and also where

Merchants can stand to earn trade bonuses.

- **Sea-Crossing Points.** At various points around the map there are green arrows that represent points land-based armies can cross without a fleet.
- **Dark Areas.** These represents areas of the map that your faction cannot see, due to not having a character close enough to show who or what is there. The completely black areas are totally uncharted.

Moving the View

You can move your view of the campaign map in the following ways:

- Move the mouse cursor to the edge of the screen to move the view in that direction.
- Use either the **arrow keys** or the **1, 2, 3 & 5 keys** on your numeric keypad to move the view in the appropriate “compass point” direction.
- Use your mouse wheel (or **+ & - keys** if no mouse wheel present) to zoom the view in and out.
- *Click* on the mini-map (bottom left of screen) to instantly move the view to that location in the world.

You can also get more information about what you see in the area you're viewing by:

- Mousing-over a **character** or object to receive more information in a pop-up tooltip.
- Right-click-and-hold over the map without a unit or settlement selected to get confirmation of what sort of terrain is at the cursor's position.

The Control Panel

In the bottom right of the screen you will find the **Control Panel** – This is where the basic controls and information for the campaign can be accessed.

- **Facton Shield button.** *Click* on this to open a panel that has information on your faction, your relations with other factions, and if you're playing as a Catholic faction, information on **the Pope**.
- **Selection Information & buttons.** The currently selected army, settlement or character will have its name displayed here. *Click* on the buttons on either side of the information to cycle through selectable settlements and characters.
- **End Turn button.** *Click* on this **button** to end your turn, while the number beneath it shows the current **turn number**.
- **Construction button.** *Click* on this when a settlement is selected to open up a scroll with its construction options. *Click* on this with a General selected outside of a settlement to build a **fort** or a **watchtower**.
- **Recruit button.** *Click* on this when a settlement is selected to open a scroll with its recruitment options. *Click* on this with a General selected outside of a settlement to hire mercenaries.
- **Finances button.** *Click* on this to bring up your faction's **Financial Details Scroll**. The number beneath it shows your current **treasury** amount.

The Review Panel

In the middle of the bottom of the screen you will find the **Review Panel** – This is where you can see what units, buildings, agents and fleets are in a given location. This is where you will transfer units in and out of your armies.

At the top of the panel you will see the Review Panel Tabs:

- **Army/Navy Tab.** *Click* to see what units are in the currently selected army/navy or settlement. *Right-click* to open up the **Military Forces Roster** to list all of your faction's armies.
- **City Tab.** *Click* to see what buildings are in the currently selected settlement. *Right-click* to open up the **Settlements Roster** to list all of your faction's cities and castles.
- **Agents Tab.** *Click* to see what non-military characters are in the currently selected army or settlement. *Right-click* to open up the **Agents Roster** to list all of your faction's agents.
- **Fleets Tab.** *Click* to see what ships are in the currently selected fleet or settlement.

The **Review Panel Display Area** is the large area below the tabs. This display area changes based upon which of the tabs you have selected. For example, if you have the “**Army**” Tab selected, you will see military units. If you have the “**City**” tab selected, you will see the buildings within a settlement.

The main way to use the review panel area is to *right-click* on any card in the panel area to get an **Information Scroll** on that unit, building or character.

The Mini-map Panel

In the bottom left of the screen you will find the **Mini-map Panel** – This is where you can quickly look to see what faction owns each region that your own faction can presently see. It is also where you will find the **Missions button**.

- **+ and - buttons.** *Click* on these two buttons to zoom the mini-map display in or out accordingly.

- **Missions button.** *Click* on this button to open up the **Missions Scroll**. There you will find a record of all current missions your faction is undertaking (see below).

- **The Mini-map.** *Click* on the panel to center the campaign map view on that location.

Starting Play - Your First Turn

The part of **Medieval II: Total War** that is played on the campaign map is turn-based – simply meaning that each faction in the game takes turns moving its armies and managing its settlements and affairs before the next one does. This means you can take as long as you like to plan out your moves on the campaign map; there is no time limit at all.

Each turn you will usually do the following things (all detailed in later sections of the manual):

- Check your **event messages**
- Move **armies** and **fleets**, attack with them
- Move **agents**, use their skills where appropriate
- Recruit **units** in settlements
- Select **buildings** to **construct** in **settlements**
- Check that your **settlements** are free of problems
- Work towards completing a **mission**

You will also sometimes have the need to do other things like:

- Engage in **diplomacy** with other factions
- Hire **mercenaries** outside of a settlement
- **Upgrade** the armor or weapons of your units
- **Repair** buildings and **retrain** units
- Combat **Heresy**

Before Ending Your First Turn

There are lots of things you can do, even in the first turn of the game. Details on all of your options are covered in the following sections of the manual, but here is a quick overview of wise things to do before considering hitting the **End Turn button**:

- Look for idle armies and agents that you may wish to use this turn. You can do this quickly by using the **selection buttons** on your **Control Panel**.
- Check for settlements that have an empty construction queue or recruitment queue. You can do this quickly on the **Settlement Roster Scroll**.
- Look for foreign **armies** and **agents** that could threaten your **settlements** or **armies**, and ensure that you are prepared for what they might do.

EVENTS & MISSIONS

What are Events?

In **Medieval II: Total War**, events are reports relating to things happening within your faction, or news from around the world. These events arrive as square icons that drop down the left side of the main display area, which you then *click* on to get the full message – Which could be anything from information about a declaration of war, news on a natural disaster or announcements of royal weddings. There are literally hundreds of events in **Medieval II: Total War** to face as a ruler in the medieval era.

To use event icons:

- *Click* to open an event icon to see the full description of whatever has happened.
- *Right-click* on an event icon to dismiss it.

Your First Event and Mission

The first event icon that appears when you start a campaign is a **mission** –

That mission will be given to you by your Council of Nobles to take control of a nearby Rebel settlement within a certain number of turns. All missions have a time limit.

Important Tip: Completing missions is always optional.

However ignoring them means failing them, and sometimes there is some sort of penalty for failure. You can always check on your current missions by *clicking* on the **Missions button** in the corner of the **Mini-map Panel** to view the **Missions Scroll**.

Who Gives Missions?

Missions can come to you from several sources, and they may vary in importance to how you're managing your faction.

The sources of missions are:

- **Council of Nobles.** These missions are essentially advice from the nobility of your realm as to what they believe would be in the best interests of your people.
- **Guilds.** Guilds are essentially trade powers and knightly orders that will interact with your faction throughout the game, depending on what you build and promote in your realm. Their missions will typically involve their "trade."
- **The Pope.** Catholic factions will receive orders from the Pope. As you would expect, he takes your success or failure in the missions he gives personally.
- **Facton Heirs.** You may be approached by the successor to another faction's throne, asking that you help speed up his ascension to power by killing his current Facton Leader!

Mission Rewards & Penalties

When you complete a mission, there is always a reward that comes with it. Not all missions have a penalty for failure, but any mission that does will have the penalties detailed in the **Missions Scroll**.

It is always wise for you to assess what the rewards or penalties will mean for your current plans for your faction, and what effort will be required to complete the mission. If something happens that would prevent you from being able to complete the mission, it will be cancelled – this does not count as failure.

Rewards may include things such as:

- A financial reward
- A bonus **unit**
- Improved relations with another faction

Penalties may include things such as:

- **Excommunication** from the Catholic Church
- Having an **Inquisitor** sent to your lands
- A deterioration of relations with another faction

Faction & World Events

Most messages are going to be reports about things that have happened in your faction, such as what units were recruited, what buildings were completed, family members that died or a mission to undertake.

You will also receive news of diplomatic happenings, such as declarations of war, or an announcement that some foreign power has become the richest kingdom in the world. Reading these messages will help ensure that you are aware of things going on both within your borders, and far beyond them as well.

Historical Events

Sometimes a message will be about a discovery in the world, or an event that heralds new possibilities or problems. An example would be the discovery of gunpowder, which is arguably the most important advance in the history of military technology.

Some historical events will just prove to be amusing, interesting or terrifying, but ensure that you read these messages to be informed of new opportunities that arise as the game progresses.

CHARACTERS

Every figure seen on the campaign map is a "character," and they fall into two basic classes: military characters and agents. Using these characters will be explained in the **Using Armies** and **Using Agents** sections of this manual, but here you will learn their role and how to read information on a specific character.

Viewing Character Information

When you *double-click* on any character on the campaign map, or *right-click* on their card in the **Review Panel**, you call up a scroll that has information on the selected character. Here you can access all the key information about this individual.

The **Character Information Panel** details include:

- **Name:** The character's name, which may alter depending on their title, or an epithet they are known by.
- **Age:** The character's age in years. Nobody lives forever.
- **Character Class:** This shows what type of character it is.
- **Attributes:** The names of the attributes are listed on the left, with the meters to the right filling with images as the attribute is higher. More on attributes below.
- **Retinue:** The personal followers and items that go wherever the character does. These affect the character's attributes.
- **Traits:** Traits can be everything from physical characteristics, to a representation of experiences and natural abilities. These can be positive or negative, and they affect the character's attributes.

Military Class Characters

These are the characters that appear as soldiers or ships on the campaign map. Their use is covered in **Using Armies**.

Generals

Available to: All factions

Role: Commands armies and governs settlements

Generals are the most important characters in your faction, as they are the only ones who can recruit mercenaries, build field structures and govern settlements. They also have a positive effect on troops being led into battle. The way you use them will greatly

determine what sort of leaders they will become and what their strengths and weaknesses will become.

Generals that weren't bribed to join your faction are considered to be a part of your "Family Tree" and can become successors to the throne of your empire.

Captains

Available to: All factions

Role: Temporary commander

When an army has no General a Captain from within one of its units will step forward to lead the army. Captains do not earn traits from accomplishments in battle unless they are promoted to a General – something that may be offered to you during play. Armies led by a Captain are more prone to bribery from foreign Diplomats.

Admirals

Available to: All factions

Role: Naval commander

Admirals command a fleet of ships in battle, and can develop their combat ability in the same way that a General can – by winning battles. They cannot govern a settlement like a General; they are a purely naval commander.

Agent Class Characters

These characters are specialists that perform tasks away from the battlefield. Mastering their use can help to ensure that aspects of your faction's workings such as religion, trade and diplomacy all run smoothly.

Priests / Imams

Available to: All factions

Role: Preaching and Denouncing

Priests and Imams are religious men who ensure that their people's faith is spread throughout their lands. They are also the only characters aside from assassins that are capable of dealing with Heretics, except they perform a **heresy** trial, rather than a physical attack.

Diplomats

Available to: All factions

Role: Diplomacy

Diplomats are refined men who are sent to negotiate with foreign dignitaries.

Although Princesses can also enter diplomacy, only a Diplomat can attempt to bribe a foreign army, settlement or character, and are thus extremely useful for wealthy factions.

Princesses

Available to: Catholic and Orthodox factions

Role: Marriage and Diplomacy

A Princess is a member of the ruling family of her faction, whose main ability is to marry a General. This can be as part of a marriage alliance to a Faction Heir, an attempt to "steal" a foreign General or to marry someone within her own faction. She can represent her people as a Diplomat.

Spies

Available to: All factions

Role: Espionage and Propaganda

Spies are intelligence operatives that are capable of moving undetected by foreign forces. Their main task is to infiltrate foreign settlements, where they will report on the buildings and garrison behind the walls. When within an enemy settlement, Spies inspire unrest in the population, and may also help disable wall defenses. Finally, Spies are also the most effective character at spotting other hidden agents.

Assassins

Available to: All factions

Role: Elimination and Sabotage

Assassins are similar to Spies in that they have a good chance of moving and operating undetected, except that their job is to directly target a person or building for elimination. Assassination attempts are considered an act of war.

Merchants

Available to: All factions

Merchants are men who serve your people by traveling to far off lands to find resources and establish a lucrative trade route back to your capital. Merchants can attempt to put a foreign Merchant out of business – however this does not count as an act of war, nor does entering foreign lands.

Character Attributes

The attributes shown on the **Character Information Panel** are your most direct means to assess your characters' weaknesses.

Command

Used by: Generals and Admirals

This is a measure of a General's ability to lead troops in battle and the higher his Command rating, the better the morale of his troops and the greater his ability to rally his troops who are routing (see **Routing**).

Piety

Used by: Priests/Imams and Generals

This shows how devout a character is seen to be. For Generals this affects the happiness of settlements he governs and his chances of surviving an inquisition. For Priests, it affects how effectively they convert the populace to their religion, as well as their chances of denouncing a Heretic or Witch.

Chivalry / Dread

Used by: Generals

This shows how honorable or dishonorable this man's actions in both rule and war may be. Letting prisoners go free, showing bravery in battle and abstaining from taxing the people harshly are examples of chivalrous behavior. Executing prisoners, exterminating large numbers of people and ruling oppressively are examples of dreadful behavior. Dread generals can cause fear to inspire a morale penalty in their enemies, while chivalrous generals can inspire a morale boost in their own troops. Chivalry and dread also have an effect upon the population of a settlement governed by a General with either attribute.

Loyalty

Used by: Generals

This shows how seriously this character honors their role of servitude. During the course of **Medieval II: Total War** there will be numerous situations that will test the loyalty of your Generals, and the higher this attribute, the more likely they shall honor their pledge to you.

Authority

Used by: Faction Leader

This shows the amount of respect commanded by a **Faction Leader**. A Faction Leader with high Authority is more likely to retain the loyalty of his Generals, while a leader with low authority is more likely to face rebellion.

Charm

Used by: Princesses

This shows how effective this woman is at swaying those she deals with. The higher a

princess's **Charm**, the more effective she is in diplomacy, and the more likely she will be to successfully convince a General to marry into her family.

Influence

Used by: Diplomats

This shows how effective this man is at convincing others to accept diplomatic proposals during negotiations. The higher a Diplomat's Influence rating, the more effective is his diplomacy.

Subterfuge

Used by: Spies and Assassins

This shows how effective this man is at performing acts of stealth and espionage. For Spies it affects their ability to infiltrate an enemy army or foreign settlement undetected. It also determines how much unrest they cause via propaganda once behind the walls, as well as their chances of opening the gates in a siege. For Assassins it effects their ability to successfully eliminate a target marked for assassination or sabotage. Both Spies and Assassins use **Subterfuge** to remain unseen from other characters, as well as spot hidden foreign agents.

Finance

Used by: Merchants

This shows how efficient this man is with money and trade. It affects a Merchant's ability to acquire a foreign Merchant's assets, and also the amount of income generated from standing on a trade resource.

Improving Your Characters

As your characters do things in the campaign, they will begin to develop traits and gain followers as they either succeed or fail. Sometimes they will develop traits just as a result of sitting around or being in a certain environment.

With both logic and observation, you should be able to see a connection between what you do with your characters, and what sort of traits they develop. Leave a General in a town with a big tavern forever and he'll eventually turn to drink. However, pro-active behavior is the way to develop positive traits and gain more useful followers.

There are literally hundreds of things that can lead to receiving traits, followers and items. Here are some examples of them:

- Hereditary traits, both through bloodline and the parents' beliefs.
- The outcome of a battle
- Personal involvement in battle
- Getting married
- Succeeding or failing at agent missions
- How you have Governors manage their settlements
- Completing certain missions
- Building certain buildings
- The environment the character lives in

Traits

Traits can come in several different forms. It is important not to think of these as abilities earned but side effects of the character's life up until this point. Your involvement with your characters' traits comes in making decisions as to where they will be and what they will do.

If your characters develop negative traits, the best way to deal with them is to either acknowledge it as a weakness of the character or attempt to redeem themselves with positive actions.

Examples of types of Traits:

- Physical characteristics
- Personal beliefs

- Leadership styles
- Experience in an activity
- Insanities
- Fears and hates

Retinue

A character's retinue is their entourage of followers, as well as their personal belongings that they keep with them on their journeys. Some of your followers and items can be transferred from one character to another by *clicking* on the item or individual and dragging them onto the portrait of another character. Of course, there are some items that characters will not part with, and there are followers who simply will not be told who they will accompany.

USING ARMIES

Total War Armies

Your armies are your primary weapon in the **Medieval II: Total War** campaign. Each army contains 1-20 military units that move and fight together. When you select an army on the campaign map, you will immediately see what units it contains in the **Review Panel**.

Things to know about armies on the campaign map:

- *Click* on an army on the campaign map to select the entire army.
- Any gold stars to the left of the army show the Command rating of the general in charge (0-10); the more stars, the better the **General** is at leading in battle.
- The banner color and symbol shows the owning faction.
- The darker color that "fills" the banner from the bottom shows the strength of the army. The stronger the army: the more of the banner will be filled from the bottom.
- There are certain things that armies led by a **Captain** cannot do. Only armies led by a General can hire mercenaries and build fortifications.

Who Commands in Battle?

The commander of an army is determined by the following rules:

- The General with the highest Command rating is the Commander.
- The only exception is when the Faction Leader is present, he is always the Commander, regardless of his Command rating.
- The commanding General's unit card will be marked with a gold star.

We will cover commanding armies in battle in **Medieval II: Total War** Battles – this section covers forming armies, and using them in the campaign map.

Unit Types

There are several different classes of unit on the battlefield, and it is vital to understand the basic role that they play. Some types of unit are very effective against other types. It is best to know this before you begin recruiting units.

The basic types are:

- **Light Infantry.** These are troops who are lightly armed and armored, and are best used in support roles to attack or defend in unison, rather than be used in an important position in a front line.
- **Heavy Infantry.** These are troops who are heavily armed and/or armoured and are generally good at engaging other infantry.
- **Spears.** These troops are specialized infantry armed with lengthy pole-mounted weapons that are ideally suited to forming a defensive line, especially against cavalry. Their role makes them vulnerable to missiles.
- **Missile.** These are troops who are armed with ranged weapons that can strike enemy targets at a distance. They are usually very vulnerable in hand-to-hand combat.
- **Light Cavalry.** These are mounted troops who are somewhat lightly armed and armored, but extremely swift and mobile. They are excellent at chasing down routing enemies, but poor against spears.

- **Heavy Cavalry.** These are mounted troops who are well armed and armored and used as a strong, fast attacking force. They are poor against spears.
- **Missile Cavalry.** These are mounted troops who are armed with ranged weapons such as bows. They are generally poor at melee combat but can hit and run, making difficult targets.
- **Artillery.** These are mobile war machines or cannons that can be used as powerful ranged weapons on both enemy troops and settlement walls and defenses. They are poor at defending themselves and typically require defending infantry to protect them.

Forming Armies

To form an army, you need to either recruit new troops in a settlement or hire mercenaries with a general outside of a settlement. Troops can be pulled together from multiple places and merged together to form a larger, more capable army.

Tips on how to have a balanced army:

- Always try to have a mix of infantry, spears, missiles and cavalry. This will ensure you have a unit to counter whatever the enemy sends at you.
- When first building an army, start with infantry. Most missile, cavalry and artillery units are poor at standing their ground without help.

Tips on how to produce an army for a special purpose:

- If you're creating a **siege army**, include artillery units capable of destroying walls. This is more reliable than building siege equipment during siege.
- If you're creating a defensive garrison, missile units are extremely effective from walls and can be defended with little infantry.
- If you're looking to capture prisoners, ensure you have multiple cavalry units to make chasing down routers easier.

Moving Armies

Select an army by *clicking* on it. Once selected, there are numerous ways to move the army, some involving attacking or merging with other armies:

- The highlighted area shows every place in the game world that the army can move during the current turn. All actions (moves and attacks) cost movement points, and as these are used the distance an army can move for the remainder of the turn will reduce.
- *Right-click* on the spot where you want an army to go. A large arrow will show the proposed route for the army.
- *Right-click-and-drag* to show the route changing for an army as its destination changes.
- *Right-click* on an enemy or neutral army or settlement to **attack** it. The cursor will change into a sword to show that an attack is possible. Attacking a neutral army or settlement is a declaration of war on that faction. See **Battles in Medieval II: Total War** to learn about how to command in battles.
- *Right-click* on another of your faction's armies (not an ally!) to **merge** the selected army into the stationary one. There are further details about merging armies that are covered below.
- *Right-click* on a friendly settlement (not an allied settlement) to merge the army with the settlement garrison (if any). The army will move into the settlement, and if the army has a General and the settlement doesn't have a Governor, then the General will be automatically appointed as the new Governor. See the **Running Settlements** section for more information.
- Red highlighted areas are in enemy zones of control, which means that they are adjacent to an enemy army. Movement in red highlighted zones is restricted. Armies cannot move directly between red spaces on the map. They must move away from their enemies (or neutral armies) before marching back into contact.
- *Right-click* beyond the green highlighted area to set a multi-turn movement order. The route will be shown as normal, except with a multi-colored line, with

each color representing one turn's movement. The army will move as ordered unless its path is blocked or is given new orders.

- Armies that can move no further will have no highlighted zone around them when selected. They will kneel to show their resting state.
- Armies are also shown as kneeling figures when they are hidden in woodland terrain and ready to ambush any passing enemies.

Merging Armies

Move an army onto another friendly (same faction) army or settlement to merge the two forces. It may be useful to merge units before attempting to merge two armies. You can't merge units at the same time as merging armies.

- The general with the highest Command rating is always in charge of a merged army. When an army led by a Captain is merged with a General's army, the Captain is reduced to the ranks and disappears.
- If fewer than 20 units in total (in both armies) are involved, then the merging process is completely automatic.

If there are more than 20 units (total, in both armies) involved in the merging, then the **Merge Armies Scroll** will appear.

- Select the units in either army that you wish to move to the other army. You can make multiple selections holding down the **CTRL key** as you *click*.
- Some units may be greyed out. These have already moved as far as they are able this turn, and therefore cannot move (merge) to another army.
- *Click* on the transfer arrow button in the middle of the scroll once you're happy with the army compositions. You can also drag-and-drop units between the two armies on this scroll.
- Once you are happy with the merged armies, *click* on the **"tick"** button in the lower right hand corner of the scroll.

Splitting Armies

There will be times when you need to take some units out of a large army or garrison and send them elsewhere – This is splitting armies.

- Select the units you wish to move using their unit cards in the **Review Panel** in the center of the **Control Panel** at the bottom of the screen.
- You can use the **SHIFT** and **CTRL** keys while selecting to make multiple selections. Hold down the **CTRL** key and *double-click* on a unit card in the review panel to select all the units of that type.
- **Move the cursor** to the spot you want the selected units to go, then *Right-click* to order them to move there.
- You can also drag-and-drop the selected units from the review panel to an appropriate location in the game world.
- In both cases, the new army that is breaking away from the original one will appear next to the force it is leaving and march to the new location.

Merging Units

After battles, there is a strong chance that you will have taken some casualties, and not all of your units will have their full compliment of men in them. Even if a unit has only a few men remaining, it will still take up one of your 20 unit slots, and may be too small to engage effectively anymore. To deal with this, you can merge two units of the same type together.

- *Click-and-drag* one unit onto another in the **Review Panel**, and the two will merge. The men in the unit being dropped are added to the target unit.

- The dragged unit may vanish if all its men are used in this way. Any "spare" men remain in their original unit.
- You can auto-merge depleted units in an army by pressing the **M key**.

Important Tip: Be aware that the experience rating of the two units being merged will be averaged out in the process.

Unit Experience

The number and color of the **chevrons** on the unit card in the **Review Panel** show unit **experience**. A unit with experience can be relied on in combat, and will usually beat an otherwise identical unit. Chevrons can also be gained by units under Generals with high Command values or as a result of good training facilities (buildings).

- No chevrons** indicate that the unit has little or no battle experience.
- Bronze chevrons** show that the unit has some experience in battle.
- Silver chevrons** show that the unit has much battle experience and is composed of highly experienced soldiers.
- Gold chevrons** show that the unit is full of veterans of field warfare who can always be relied upon.

Hiring Mercenaries

An army led by a general can hire mercenaries when outside of a settlement. Using mercenaries can be somewhat expensive, however they offer you immediate support away from a friendly base.

Click on the **Recruit Mercenaries** button in the **Control Panel** (it replaces the **Unit Training** button that shows when a settlement is selected). When there are no mercenaries available the button is greyed out.

- This brings up the **Army Details Scroll**, showing the General and the list of available mercenaries.
- Click on any mercenary unit to select it and add it to the "queue" of mercenaries to be hired. You can deselect a mercenary unit for hiring by clicking on it once again.
- Right-click on a mercenary to bring up details about the unit.
- Click on the "**Hire all queued units**" button at the bottom of the scroll.

Things that affect what sort of mercenary units are available:

- The region of the world the general is in.
- Recruiting on the coasts allows the hiring of mercenary fleets.
- Being on a Crusade or Jihad - some units will only join a General on a religious cause.

Building Forts & Watchtowers

Only an army under the command of a General can build watchtowers and/or forts.

When this is not possible this button is greyed out.

- Clicking on the **Construction** button brings up the **Field Construction Scroll**. From here you can select either a **Watchtower** or a **Fort** - Each has a cost associated with it.
- Watchtowers** are permanent structures that you can erect in your lands to give your faction a better view of incoming foreign armies and characters.
- Forts** require a garrison to remain in play. If it is empty and does not have a garrison at the end of any turn it will fall into disrepair and be removed from the campaign map.
- Forts** do not actually belong to any faction. If one faction constructs a fort and leaves it empty, another faction's forces can move into the fort and take it over - be aware this is a declaration of war.
- A **General** can build as many watchtowers and/or forts as you want in a single turn, limited only by movement points (his ability to move to a new site).

Forts can be extremely useful in defending strategic "choke points" such as mountain passes: an enemy will have to lay siege to the fort before he can advance. It's even possible to build a "wall" of forts to isolate an area.

Picking Your Ground

An important thing to note about the campaign map in **Medieval II: Total War** is that the terrain that you see is very much a reflection of what you'll see in the battle map when two armies do battle there. If you position your army on hills and an enemy army attacks you, you will have the opportunity to position your troops on hills - a reliable defensive tactic. Some unit types are less effective in certain terrains, while others are more effective. For example, a unit of archers can fire further when shooting from higher ground, but are very ineffective when firing at a target in the woods.

Finally, positioning troops next to a friendly or allied army will see them join as reinforcements during battle should one ensue. See **Using Reinforcements** below.

Tip: When you have no unit or settlement selected, *right-click-and-hold* on the campaign map to check what the terrain type is at that point.

Setting an Ambush

When an army is moved into "Woodlands" terrain, it can become hidden from the enemy - This is considered being placed for an ambush in **Medieval II: Total War**. The ambushing army will attack any enemy army that moves next to them, without giving them an opportunity to position their forces before battle.

Attacking with an Army

When you have an army selected *right-click* on the enemy army or settlement you wish to attack:

- The most important piece of information is the **Balance of Power** in the center of the scroll. When you move the cursor over the crossed swords you can see the odds for the coming battle.
- The **Battle Deployment Scroll** will appear. This gives a breakdown of your forces and the enemy arrayed against you.
- Reinforcements from adjacent armies are also shown here. See **Using Reinforcements**, below.
- Click this **button** to fight the battle for yourself, taking control of your units on the battlefield. This gives you the most control and is - we think - the most fun!
- Click this **button** to have the CPU fight the battle out automatically for you and give a result. Casualties may be heavier than if you fight the battle for yourself, and you cannot protect your **General** from harm, so he may be killed.
- You can cancel your attack. When you do this your army will withdraw to a nearby location.
- If you're attacking a settlement, then this is dealt with in the **Sieges & Siege Battles** section of the manual.

Using Reinforcements

Reinforcements can join an attack. When a battle is auto-resolved, their strength is simply taken into account. When a battle is fought out in detail, they will actually join the battle in some context:

- When one army attacks, any other friendly army (yours, or belonging to an ally) that is adjacent to the army or settlement under attack can be reinforcements.
- The army that attacks is the one that you control directly. Make sure that your forces are all in the red zone of control of an enemy army, or cancel the attack and then move up another army to act as reinforcements before entering battle.

- Any adjacent army that is commanded by a General or a Captain can be placed under AI control on the battlefield by *clicking on the checkbox* next to the “AI control” icon. This will see that army arrive as one complete force on the battlefield.
- Any adjacent army that is not under AI control will give the player total control of the reinforcements that arrive. Remembering that there is a limit of 20 units per army, reinforcements will appear as and when a “slot” in your army is available, either through casualties or because a unit has run away.
- Reinforcements on the battlefield always appear from a direction that matches their position on the campaign map.

Multiple Attacks

You will notice that most times when you defeat an enemy army that they retreat a few steps rather than vanish. It is very important to be aware that your armies are capable of attacking multiple times per turn, provided that they have the movement points required to do so. Thus instead of allowing a defeated army to scamper away to rebuild itself and bother you later, you can move in to attempt to wipe the force from the map.

USING FLEETS

Total War Fleets

The naval ships that you see on the campaign map seas are **fleets**. Each fleet has an Admiral, who has his own Command rating for combat at sea. Fleets engage each other in the same way that armies do, only that the battle is always auto-resolved. Fleets serve two other very useful roles aside from assaulting enemy fleets:

- Transporting.** Fleets can be loaded up with a full army and agents to take them to distant shores they otherwise cannot reach.
- Blockading.** Fleets can be used to close the passage into foreign **ports**, cutting off the sea trade of the settlement in the same region.

Who Commands in Naval Battles?

As stated under “Admirals” in the **Characters** section, there can only be one Admiral per fleet – So he always commands the fleet. The basic things to know about Admirals are:

- Admirals earn Command stars from winning naval battles, improving their performance in future conflicts.
- Once they earn a Command star, Admirals cannot merge with another Admiral.

Moving Fleets

Fleets move much like armies, but there are a few key differences due to the nature of being at sea. After you have selected a fleet:

- A green movement area will surround it. The fleet can move to any point within this zone during its turn. Coastal squares will be included in this zone when there are passengers on the fleet, as they could disembark into one of these land squares.
- Red spaces in the movement zone are adjacent to enemy fleets.
- You can order a fleet to move beyond the green zone, in which case it will remember its orders and a colored line shows where the fleet’s headed. Each color segment shows a turn’s worth of movement.
- The Review Panel** in the center at the bottom of the screen will change to show the ships in the fleet along with characters and military units on board.
- The movement rate of your fleet changes as they enter deeper or shallower waters. Travel around the shallows is much quicker and safer.
- At the beginning of the game, no faction has a ship capable of making ocean voyages. This will change with certain events during the game, and eventually the following ships will become available to make such a journey: **Baghlah**, **Caravel**, **Carrack** and **Grande Carrack**.

Using Fleets as Transports

If you want an army or agent to board a fleet, you will have to bring them to the shore to do so. Select the land-based army or agent and move the cursor over your fleet. The cursor will change to a boarding symbol to show that this move is possible.

- Right-click* to confirm the boarding order. From now on, movement orders to the fleet will include its passengers.
- To disembark passengers, select the fleet and then *right-click* on a coast. Everybody aboard a fleet will then disembark at this spot. Any and all agents will be attached to a disembarked army.
- If you want to partially unload a fleet select the units or agent(s) in the review panel, and then *right-click* on the campaign map on the coastal area where you want them to disembark.

Merging & Splitting Fleets

To merge two fleets, simply move one fleet to the location of another. If the two fleets have more than 20 ships in total then you’ll be asked to decide exactly which ship ends up in each fleet. In every other case one large fleet of 20 or fewer ships will be created.

Keep in mind that you cannot merge two Admirals into one fleet if one of them has earned a Command star.

If you wish to split a fleet, select the ships you want to form a new fleet in the **Review Panel** and then drag-and-drop them to the destination for your new fleet. They will automatically leave and a new admiral will be appointed for the new fleet. Any passengers stay with the original fleet.

Attacking with a Fleet

As previously stated, all naval battles are auto-resolved, meaning all you need to do is select a fleet and set them towards the enemy. To start a naval battle, *click* on your fleet to select it, and *right-click* on the fleet you wish to attack.

- Fleets that lose ships in combat will lose any military units or characters that the lost ship(s) happened to be carrying.
- The Command rating of the fleet’s Admiral influences its fortunes in battle.
- After combat the losing fleet will either sink or pull away from the victorious enemy.

Blockading Ports

It is possible to blockade an enemy port and cut its trade links with the outside world. The blockaded faction will not receive sea-trading income each turn that the blockade is in force.

- Select a fleet, then *right-click* on the port you wish to blockade. A barrier will be placed around the port to show that a blockade is in force.
- You can lift a blockade at any time by moving your fleet away from the port.
- You can break enemy blockades by successfully attacking the blockading fleet. Victory will break the blockade.

Trouble at Sea

Aside from the fleets of enemy factions, there are two major perils at sea – pirates and storms. Pirates are Rebel ships that will aggressively assault your own forces. Storms however can cause fleets to lose entire ships, and any military units they are carrying on those ships will be completely lost as well. Although the effects of a storm are less severe in shallower waters, avoiding them altogether is the only truly safe way to deal with them.

RUNNING SETTLEMENTS

What do Settlements do?

In the Grand Campaign, settlements serve as both military training centers, as well as your money-making machine. They form the central population centers from which you will recruit men into service, tax the populace and establish an infrastructure to support trade. There is always one settlement per region, representing the civil center for that area of land. *Medieval II: Total War* allows the owner of a region of land to maintain their settlements as either cities or castles – with the ability to change between the two, with certain limitations. You will need both cities and castles in your realm if you are to be successful, as they both play very different roles.

How Do I Manage a Settlement?

Firstly, to properly manage a settlement, you need to install a General to serve as Governor (unless you selected “Manage All Cities” in the Grand Campaign settings prior to starting). If you do not do so, you will not be able to control any of the following tasks that are involved with properly managing a settlement:

- Recruit units for your **armies**, and **agents** for your non-military tasks.
- Construct new buildings, which will improve various aspects of your settlement's workings and capabilities.
- Adjust the **tax rate** in cities to ensure that they generate as much income as possible for your faction.
- Retrain units, to replenish their ranks and also **upgrade** their **weapons** and/or **armor** if the right buildings are present.
- Repair buildings that may have been damaged by siege attacks, rioting or ominous disasters of terrifying proportions.
- Keep control of **public order**. If you do not do this, you will face the prospect of riots and possibly even a rebellion in the settlement.

All of these things will be explained throughout this section of the manual.

Settlements on the Campaign Map

Cities and castles are represented on the campaign map with a figure that looks appropriate for the size, type and culture of the settlement. Each settlement has its own label that includes basic details about the settlement's status. These details are:

- **Settlement Name** - The top line includes the **name** of the settlement, and will also show an appropriate icon if it is suffering from **revolt** or the **plague**.
- **Income** - The number beside this icon shows the **income** generated by the settlement each turn. A negative value means that the settlement is actually running at a loss.
- **Public Order** - This icon shows the overall **happiness** of the settlement population: **Green** – happy, **Yellow** – content, **Blue** – disillusioned, **Red** – rebellious.
- This icon shows whether or not the **population** of the settlement is increasing in numbers or not: **Green** - Indicates the population is growing, **Amber/Orange** - Indicates the population is stable, **Red** - Indicates the population is falling. This is a matter of concern.
- This icon appears if a unit is being trained in the settlement. Green indicates training is in progress, Red indicates the recruitment queue has stalled.
- This icon appears if a building is being constructed or repaired in the settlement. Green indicates construction is in progress, red indicates the construction queue has stalled.

- This icon appears if the settlement is being auto-managed.

The Settlement Scroll

Regardless of whether it is a **city** or a **castle** you wish to examine, to view its **Settlement Scroll**, double-click on the settlement on campaign map. Here you will see the **Governor Panel** at the top of the scroll, followed by the basic details and settings of the settlement, and then finally the **Recruitment / Construction Panel**.

The basic details displayed for settlements are:

- **Income**. The amount of florins this settlement is generating for your treasury per turn.
- **Public Order**. The percentage shown here represents what level of public order is being maintained, with 100% being considered stable. The further this drops below 100% the more likely the settlement is to experience rioting, or possibly even rebellion (losing the settlement to Rebels). The higher this is above 100%, the happier the population is with their situation.
- **Population**. This is the number of people living in the settlement, and has a direct effect upon upgrading all cities, and some castles.
- **Population Growth**. The percentage shown here represents the current population growth, or decline per turn. A settlement with high population growth will be able to be upgraded sooner.
- **Automate**. Click on the checkbox to put the settlement's building and/or construction tasks under CPU control.
- **Tax Rate**. This shows the current level of taxation on the people in the region: Low, Normal, High, and Very High. Only cities can have their tax rate adjusted - Use the arrows to cycle through the settings. Higher rates yield more tax income for your treasury, but also result in a direct drop in public order.
- **Race Settings**. Certain Islamic factions create facilities to support horse racing festivals. Use the arrows to adjust how often the races are held – More frequent races improve happiness, but cost money to hold.

Understanding Cities & Castles

Cities and castles are very different sorts of settlements, but the way you improve them is identical – by constructing **buildings**. The difference lies in what buildings you can construct within the two different types of settlement.

Being able to choose where your cities and castles lie can be very useful, and the smaller ones can be converted to the other type of settlement. Note that it is very important to understand that if you intend to convert your settlements in the future – some types of buildings do not belong in both settlement types, and therefore won't survive a conversion. There will be more on constructing buildings and converting settlements below. Firstly it is necessary to understand how the two different settlement types work.

Cities

Cities are settlements that revolve around supporting trade and a large population. In fact, it is population that drives these places - When a city reaches a high enough population it will be ready to grow into a larger settlement with the construction of better walls. Inside cities you will find constructions such as inns, markets, town halls, religious buildings, and schools of alchemy. Aside from bringing wealth to your realm, these buildings offer access to agents that can be of great use to your faction's cause.

Cities provide the **benefits** of:

- The ability to set the tax rate for the region as desired.
- Several types of buildings that support and improve trade income.

- Buildings that spread your faction's faith greatly.
- Buildings that allow you to recruit spies, assassins, priests, diplomats and merchants.
- Buildings that allow the recruitment of militia and siege artillery.
- Free upkeep for some militia units while garrisoned.

Cities come with the problems of:

- Public unrest leading to riots, or even rebellion.
- Corrupting Governors with a wealthy environment.
- Usually lacking in buildings to recruit cavalry and missile infantry.
- Only one defensive wall for sieging forces to breach.

City upgrading works as follows:

City Size	Population Required	Wall Required to Upgrade
Village	-	N/A
Town	400	Wooden Palisade
Large Town	2000	Wooden Wall
City	6000	Stone Wall
Large City	12000	Large Stone Wall
Huge City	24000	Huge Stone Wall

Castles

Castles are military settlements with strong defenses that oversee the surrounding lands, collecting the taxes at a set rate with a rigid regularity. This makes them the ideal place to train men for military service, and make a stand.

Castles can be upgraded to a larger size that can play home to more effective structures, simply by constructing the next level of castle in the **Construction Panel**. That is until you wish to upgrade to the two highest castle sizes, "Fortress" and "Citadel". These also require a certain population already in the settlement before you can construct them.

Castles provide the benefits of:

- Naturally high public order.
- Very strong defenses, including multi-ring walls at the higher levels of castle size

Castles come with the problems of:

- Not being able to adjust the tax rate.
- Usually lacking in buildings that improve trade.
- Usually lacking in buildings that recruit agents such as Spies, Assassins, Diplomats and Merchants.
- Usually lacking in academic buildings.

Castle upgrading works as follows:

Castle Size	Population Required	Defences
Motte & Bailey	-	Keep only
Wooden Castle	-	1 Wooden Wall
Castle	-	1 Stone Wall
Fortress	4500	2 Stone Walls
Citadel	9000	3 Stone Walls

The Governor

Your Generals take on a very different kind of leadership role when you move them into a settlement to become its **Governor**. His Command rating may be what makes a General capable on the battlefield, but it is actually his reputation for Piety and Chivalry or Dread that will make him a better man for the job.

- Governors with a high Piety rating are better at reducing disorder caused by religious unrest and provide an influence bonus to the public order of the settlement.
- Governors with a high Chivalry rating provide an influence bonus to the public order and population growth of the settlement.
- Governors with a high Dread rating provide an influence bonus to the public order of the settlement.
- Governors can also have traits and retinue that improve various aspects of how the settlement functions, detailed in their tooltip displays.
- The General with the highest Piety rating will be installed as Governor. The people generally prefer to serve under a man of faith – They are both spiritually sound and generally educated as well.

Constructing Buildings

Settlements are a collection of buildings and the way to develop and improve your cities and castles is to construct various buildings and facilities. This is done by *clicking* on the tab labelled "Construction" to open the **Construction Panel**.

- Click on the **Construction Tab** to see what buildings are available for construction.

- The number of different buildings shown in the **Construction Panel** depends on the type of settlement, the size of the settlement and what you have already built there.
- Right-click on a building in options or the **Construction Queue** to bring up the relevant **Building Information Scroll** to see what benefits you will receive from the available construction options.
- Buildings with construction costs that are beyond your treasury are greyed out, but can still be added to the queue for construction when funds become available.
- Click on a building in the **Construction Panel** to add it to the **Construction Queue**. If you can afford the buildings, and there are no other items currently waiting to be built, the cost of the building is immediately deducted from your treasury.
- The leftmost building in the queue will be shaded to show that work has begun, and the number of turns until completion is shown. The shading is gradually removed as progress is made over a number of turns.
- Click on a building in the **Construction Queue** to cancel the construction order. Any allocated funds are automatically returned to your treasury.
- Buildings in the **Construction Queue** are completed in left-to-right order. You can alter the order of construction work by dragging-and-dropping the building pictures until you are happy with the construction order.
- Some buildings can only be constructed if you are approached by a guild, or a knightly order.

The Building Browser

At the bottom of the **Settlement Scroll** is a button that will open up the **Building Browser**. This is where you can find all the information you need on all of the things you can construct. The **Building Browser** is split into two parts - the left panel provides an image display showing what buildings of the currently selected **building type** are available with the different sizes of settlement. The panel on the right is where you can see all the building types that are available in a city or a castle, depending on which tab you have selected.

- The **settlement** images on the left show what level your settlement is currently at. Greyed out items represent the sizes your settlement can grow to later.
- The building images beneath the "City" heading show which levels of this type of building type are available in a city. Greyed out items represent buildings you have yet to construct. Right-click on any building image to see its **Building Information Scroll**.

- The **building** images beneath the “Castle” heading show which of this type of building are available in a castle. Greyed out items represent buildings you have yet to construct. **Right-click** on any building image to see its **Building Information Scroll**.

- If a building image does not have an equivalent building in the other type of settlement for that settlement size/level, then the building will have to be destroyed if you choose to convert the settlement.

- When this icon is colored, it shows that you can currently construct this type of building in your settlement.

- When this icon is greyed out, it shows that you cannot yet construct this type of building in your settlement.

- The types of buildings that you currently have constructed in your settlement have their name shown in black in the panel on the right.
- The types of buildings you have not yet constructed in your settlement have their name shown in a lighter shade in the panel on the right.

Repairing Buildings

Buildings can be damaged through rioting, natural disasters and siege assaults. It's quite possible to damage a town without taking it and, the longer an assault takes, the more “collateral damage” is done during the battle. Repairing buildings works in a similar fashion to new Construction. The cost of repairs is usually substantially less than the cost of a new building, both in terms of cash and time.

- **Click on the Repair Tab** to see what buildings require restoration work.

This will be greyed out if no buildings are damaged.

- Instead of being presented with Construction Options, there is a collection of **Buildings Needing Repair**.

- **Click** on any damaged building to add it to the Construction Queue. It can be dragged-and-dropped in the queue, and clicked to cancel the work as described above for new construction work.

Recruiting Units, Ships & Agents

To form armies, construct ships and enlist the service of agents, you will need to recruit them in a settlement. Recruiting units and agents costs money, which will be deducted from your treasury to cover their training, equipment and starting wages – Once recruited, units, ships and agents go into a **Recruitment Queue**.

They will arrive for service in the following turn, so long as they are in one of the recruitment slots.

There are several key things to know about how recruitment works before you begin:

- **Recruitment Slots** – As a settlement grows in size, it gains more recruitment slots, allowing it to recruit more units per turn.
- **Recruitment Queue** – As you select units to recruit they are added to the Recruitment Queue.
- **Recruitment Pools** - Units are recruited from a “pool” of men that are ready to be trained into service, the number in the top-right corner of the unit image represents how many units are ready to be trained right now. When you take men from the pool to recruit a unit, it will replenish back up to its limit over time.
- **Recruitment Effects Combine** – If you have two buildings that can recruit the same unit in one settlement, that unit will have a larger recruitment pool limit, and will replenish more quickly.
- **Buildings Allow Recruitment** – You will need to construct buildings in order to recruit units.

- **Agent Limits** – There is a limit to how many agents, such as Priests/Imams and Merchants, you can recruit. When you construct higher level churches and markets respectively, you will increase the amount of agents you can put into service. You will find these limits on the relevant **Building Information Scrolls**.

To recruit units & agents in your settlements:

- **Click on the Recruitment Tab** to see what units are available for hire on the **Recruitment Panel**, with the **Recruitment Queue** shown at the bottom.

- **Click** on a unit in the main section of the Recruitment Panel to add it to the Recruitment Queue. If you can afford to train the unit, and there are free recruitment slots available, the money is immediately spent. The men required to recruit the unit are removed from the pool immediately.
- Units with recruitment costs that are beyond your means are greyed out, but can still be added to the Recruitment Queue when funds become available.
- Units may also be greyed out if there are insufficient “spare” men in their unit pool to form a unit. Mouse over the unit you wish to purchase and you will receive a tooltip that will advise how long until you are able to recruit this unit again.
- All ships are treated as military units, but they appear at the port in the settlement's province.
- The leftmost units in the queue will be colored to show that training has begun, and that they will arrive next turn.
- **Click** on a unit in the Recruitment Queue to cancel the training order. The unit will disappear from the queue, and any allocated funds are returned to your treasury.
- Up to nine units can be entered into the Recruitment Queue. When the queue is full, all units in the Recruitment Panel will be greyed out and unavailable.
- You can alter the order of recruitment by dragging-and-dropping the unit cards.
- **Right-click** on a unit card to bring up the relevant **Unit Information Scroll**.

The Unit Information Scroll

This scroll shows information about a given unit. This includes historical background, and the unit's in-game effects, including the all-important training and upkeep costs. The **Unit Information Scroll** also allows you to disband your units. This saves your faction upkeep costs of the unit.

- **Click** on this button to **disband** the unit. The soldiers in the unit are added back to the unit pools for the region's settlement. This allows the men to be available for recruitment again if the need arises, although it does “cost” any military experience that the men might have gained.

Recruitment Buildings

If you want to field the best units available to your faction, you will need to know which particular buildings will provide you with the ability to recruit these troops. These three lists below show building types that can always recruit units, types that can recruit agents and finally some factions that get bonus recruitment from some types of buildings.

Buildings types that recruit units:

- **Walls** – Cavalry units
- **Castles** – Knight (Cavalry) units
- **City Barracks** – Militia Infantry and Gunpowder units
- **Castle Barracks** – Infantry units
- **Ranges** – Missile units
- **Stables** – Cavalry units
- **Siege** – Artillery units
- **Gunsmiths** – Cannon units
- **Military Academy** – Special Elite units
- **Horse Racing** – Cavalry units
- **Plaza del Toro** – Cavalry units
- **Knights Templar** – Knight (Cavalry) units
- **Hospitaller Knights** – Knight (Cavalry) units
- **Teutonic Knights** - Knight (Cavalry) units
- **Knights of Santiago** – Knight (Cavalry) units
- **Hashashim's Guild** – Special Infantry units
- **Woodsmen's Guild** – Special Missile units
- **Masons' Guild** – Special Militia Infantry units
- **Merchants' Guild** – Special Cavalry units

Building types that recruit agents:

- **Churches/Masjids** – Priests/Imans
- **Inns** – Spies and Assassins
- **Markets** – Merchants
- **Town Halls** – Diplomats
- **Academy (castle)** – Spies, Diplomats and Assassins

Factions that can gain special recruitment options from certain buildings:

- Holy Roman Empire – High level **Town Hall** buildings
- Milan – **Town Hall**
- Venice – **Town Hall**
- Turks – **Town Hall**
- Russia – **Town Hall**
- Hungary – **Assassins' Guild** and **Inns**
- Denmark – **Churches**

Retraining & Upgrading Units

Retrain

You can replenish a unit's numbers and ensure that it has the best weapons and armor that a settlement can provide by retraining it.

Replenishing a unit's numbers requires that you have a building present that can recruit the type of unit you want to bring back to full strength. Upgrading weapons and armor requires you to have a certain building, have the funds to pay for the upgrade and finally satisfy some other conditions (see **Upgrading Armor** and **Upgrading Weapons**).

A unit in a garrison is eligible to be retrained if it meets one of the following two conditions:

- The unit is numerically **under strength**: it has taken losses and has fewer men in its ranks than when it was originally trained. Under-strength units that are retrained may have any battle experience diluted by the raw recruits who enter their ranks.
- If a unit is able to **upgrade** its armor or weapons (see below).

Important Tip: Be aware that retraining costs money, and can be quite expensive when you wind up upgrading and replenishing your units at the same time.

Upgrading Armor

The obvious advantage of upgrading a unit's armor is that it becomes better at taking damage in battle and surviving – useful for any unit on the field.

- Different units have varying levels that their armor can be upgraded to. The higher the level a smith building is, the higher the level of armor it can upgrade a unit's armor to.

Armor Types

These are the levels of armor available to units, and also the Smith building required to upgrade to that armor level.

Armor Types

- Unarmored
- Padded or Leather
- Light Mail
- Heavy Mail or Breastplate
- Partial Plate
- Full Plate
- Advanced Plate

Smith Building Required

- None
- Leather Tanner
- Blacksmith
- Armorer
- Heavy Armorer
- Master Armorer
- Armor Factory

Upgrading Weapons

There is only one level of weapon upgrade capable for any given unit. To upgrade a unit's weapon, you simply need to have the right kind of building present, and not already have the upgrade.

Weapon Types

These are the types of weapons that can be upgraded in settlements – If you want to check to see what weapon type a unit has, you'll find it listed on its **Unit Information Scroll**.

Weapon Type

- Melee
- Gunpowder Troops
- Cannons
- Artillery

Weapon Upgrade Building

- Swordsmiths' Guild
- Alchemists' Lab
- Alchemy School
- University

The Guilds

In Medieval Times, the **guilds** used their widespread influence to regulate trade throughout the western world. Each guild represents a particular trade, study or order – such as the Masons' Guild, Theologians' Guild or the Knights Templar.

- **All guilds offer benefits.** You can look in the **Building Browser** to see which guilds are available to your faction, then check the benefits that come with each guild available on their **Building Information Scrolls**.
- **Some guilds are only available to certain factions.** The Knights of Santiago for example are specific to Spain and Portugal.
- **Guilds are "invite only."** Guilds approach you about constructing a guild house in your settlements. They are more likely to offer to do this if you support their trade or cause.
- **Guild Houses and Minor Chapter Houses.** These are the lowest ranks of a guild building, and cost 1000 florins to build. They can exist in any settlement in your faction.
- **Master Guild Houses and Major Chapter Houses.** These are the second ranks of a guild building, and cost 2000 florins to build. Only one can exist in any given faction's lands.
- **Headquarters.** These are the highest rank level of guild building, and cost 3000 florins to build, but offer incredible benefits. Only one of these will exist in the entire world at any given time.
- **Keep working for upgrades.** You will need to continue to support your guild's interests to receive an offer to upgrade it to the next rank of building. Thus, only factions that truly focus on something find a guild headquarters in their lands.

Faction-Specific Buildings

There are a series of special buildings that are only available to a small selection of factions, sometimes even just one, that are called Faction-Specific Buildings. These structures offer benefits that are often unique, and thus, can help their faction to develop an edge in a certain aspect of their empire.

For example, the Turks, Egyptians and Moors can all construct Horse Racing buildings to recruit cavalry in cities - a genuine advantage.

The Settlement Details Scroll

This scroll allows you to review the settlement in detail, and see what factors are contributing to the overall **Population Growth**, **Public Order**, **Income**, and **Religion** of the regions.

- For each of these four areas of interest, the positive factors are shown above the negative factors.
- The exception to this is that the Religion details show the dominant religion on top, and the breakdown of the minority religions in the bottom row.
- Move the cursor over each icon and a tooltip will appear telling you what it represents. Use this information to discover what is preventing your settlement from running at its best.
- The other important, perhaps vital, piece of information shown beneath the Religion details is the length of time that the settlement can withstand a siege. This represents the surplus food that the settlement has in storage.
-  Click this button to bring up the **Trade Summary Scroll**. This will allow you to see how your settlement is generating taxable income.
-  Click on this button to make this settlement your capital. This is where all new Generals and reward units from Missions will appear.

The Trade Scroll & Trade Resources

There are two ways to raise the income from a settlement: one is to change the tax rate (through the **Settlement Scroll**); the other is to improve the economic structures in a settlement. Taxable trade income is improved by having better traders and markets in your settlements, and by the quality (and number) of connecting routes to other settlements (roads and sea routes).

There are three potential generators of taxable income: **trade**, **farming** and **mining**. All of these can be improved by constructing different buildings, although all three also rely on the resources in the province.

- Any resources in the surrounding province will be traded automatically, if only within the local settlement.
- **Mines** can be built to extract precious metals that can be seen on the campaign map as metallic resources. These need to be constructed like any other building.
- **Farms** increase the income from farming and the growth rate of a settlement as more food is generated. However, not all regions are equally fertile, so don't expect farms to have the same effects in all parts of the world. That said, a settlement always benefits from farming improvements.
- **Market** buildings in a settlement improve the efficiency of trade, and the amount of money it generates. It will also allow you to recruit Merchants.
- A **Port** (and its subsequent upgrades) allows trade goods to be moved greater distances, with a consequent increase in the value of exports and imports. Ports always appear on the coastline of the region, although they are part of the settlement. They also help train naval units, of course. Finally, landlocked regions cannot have ports.
- **Sea Trade** buildings also increase your overall trade income after you have constructed a **Port**, and allow more trade fleets to connect to your settlement via the port.
- **Roads** allow trade goods to be carried to neighboring settlements automatically. They also allow the faster movement of armies and agents as well.
- **Merchants** can also be sent to distant trade resources to earn extra trade income for

your faction. This is covered in detail in the **USING AGENTS** section of the manual.

Trade routes are shown on the map as convoys of wagons moving along roads, or as dashed lines between ports. Trade routes can be blocked by enemy armies (including rebels and bandits) on land, and by enemy fleets at sea.

Converting Settlements

One of your construction options will often be to convert your settlement from city to castle, or vice-versa. This involves re-arranging the basic layout of the settlement defenses, and takes both time and money.

It is **very important** to note several key things about converting settlements:

- When a city settlement has grown to become a "Large City," it can no longer be converted to a castle.
- Be aware that when you convert a "Citadel," it will convert to a "City" – a lower level settlement.
- Use the Building Browser to check to see which of your settlement's constructions can exist in both settlement types.

City Upgrading & Conversion

City Level	Population to upgrade to this Level	Conversion to Castle...
Village	-	Motte & Bailey
Town	400	Wooden Castle
Large Town	2000	Castle
City	6000	Fortress
Large City	12000	No longer possible
Huge City	24000	No longer possible

Castle Upgrading & Conversion

Castle Size	Population Required	Conversion to City
Motte & Bailey	-	Village
Wooden Castle	-	Town
Castle	-	Large Town
Fortress	4500	City
Citadel	9000	City

USING AGENTS

Agents are not military characters, but have their own form of aggressive ability in **Medieval II: Total War**. For most agents, using their "Active" abilities is as simple as *right-clicking* their particular target – whether it be a city to infiltrate for a Spy, or a General to kill for an Assassin.

- Agents move and merge like armies do.
- When an agent succeeds or fails when using an ability there is a chance their traits will be adjusted – Directly affecting their main attribute (eg. A Spy who infiltrates successfully may see an increase in their Subterfuge rating). It is best to send agents on easier tasks at first to help them develop some experience.
- The number of Merchants and Priests that a faction can recruit is limited. Building larger Markets and Churches respectively will raise the limits.
- Princesses arrive for service when they come of age. You can check your **Family Tree** (covered later in the manual) to see when your next noble daughter may be due to begin serving her people.

Using Merchants

Trading - Passive ability

Merchants generate trade income for their faction when they stand on a trade resource on the campaign map, sending the precious goods or minerals back to their faction capital.

There are several things to know about how trade works:

- **Checking income per turn.** You can see how many florins per turn the currently selected merchant will earn from a trade resource by mousing-over the resource and reading the tooltip.
- **Finance rating.** The higher a Merchant's Finance rating, the more florins they will generate per turn.
- **Trade rights.** Having trade rights with the faction that owns the resource a merchant is trading increases the amount of florins generated.
- **Resource value.** The amount will vary based on the actual resource itself. Resources like gold and silk are valuable commodities.
- **Distance bonus.** The further the closest instance of a trade resource is to a merchant's capital, the greater a bonus he will get to the trade income he will earn from it.

Acquisition – Active ability

Acquisition is when one merchant attempts to forcibly seize the assets of another merchant, putting them out of business. Success means an immediate financial bonus, and control of any trade resource the foreign merchant may be standing on. Failure could either mean an annoyance or the end of the aggressor's career.

- Right-click on a foreign merchant to make an Acquisition attempt. The chance of success will be shown on a panel – press the **Acquisition button** to proceed.
- A merchant's Finance rating is the primary factor in determining success or failure.
- Acquisition is not an act of war, though it may well annoy the faction that you are attacking in this economic manner.

Using Priests & Imams

Preaching – Passive ability

Priests and Imams are constantly spreading their faith in the region they are in, which effectively "converts" a percentage of the population from the other religions, over to his faction's religion.

- **Piety rating.** A Priest or Imam's Piety rating directly affects how great a percentage of the population that they can convert.
- **More is better.** Multiple Priests or Imams can work in a region together to convert the population more quickly.
- **Preaching is not a transgression.** Preaching in another faction's lands is not considered a diplomatic transgression or an act of war.

Denouncing – Active ability

Priests and Imams can rid their lands of Witches and Heretics by attempting to denounce them at a trial for Heresy. Success means the blasphemous individual is put to death. Failure to denounce a Heretic can result in him escaping, or converting the Priest into another Heretic. Failure to denounce a Witch can result in the woman escaping, or worse, destroying the Priest.

- Right-click on a Witch or Heretic to make a Denouncement attempt. The chance of success will be shown on a panel – press the **Denounce button** to proceed.
- A Priest or Imam's Piety rating is the primary factor in determining success or failure.
- A Priest or Imam that has traits stating they have some **Unorthodoxy** is more likely to become a Heretic during denouncement attempts.

Using Spies

Infiltration – Active ability

Spies will attempt to infiltrate any army or settlement they are moved into, unveiling information about the target. Success means the information is gathered and displayed immediately. Failure will mean that the Spy will either be driven away before they gather information, or killed in the event that they are caught in the act.

- Right-click on a settlement, army or agent to make an Infiltration attempt. The chance of success will be shown on a panel – press the Infiltrate button to proceed.
- **Subterfuge rating.** A Spy's Subterfuge rating directly affects their ability to infiltrate a settlement successfully.
- If a Spy infiltrates a settlement, they will begin to spread propaganda to instil a small sense of unrest – affecting Public Order.
- **Act of war.** Unlike most agent actions, if caught, an infiltration attempt will be counted as transgression. If the spy succeeds however, the enemy is none the wiser – secrecy is part of the success.
- **Leaving voluntarily.** Double-click on the settlement your Spy is in, select the **Agents tab** on the **Review Panel**, then click on your Spy on the **Enemy Settlement Details Scroll**. He can be moved out of the settlement as normal.

Stealth – Passive ability

Spies are constantly attempting to remain unseen by other factions, so even though you can see your spies on the campaign map all the time, the other factions cannot.

- **Subterfuge Rating.** A Spy's Subterfuge rating directly affects their ability to both remain hidden, as well as detect other hidden agents, such as Spies and Assassins.
- **Constant, not foolproof.** Even though stealth is a constant effect, it is not foolproof, and there is always a chance of being detected by a foreign character.

Using Assassins

Assassination – Active ability

Assassins are capable of targeting any one character on the campaign map for termination, regardless of whether they are out in the wilderness or inside a foreign settlement. Success means the targeted character is killed, and their faction will be unaware as to who was responsible. Failure will mean that the Assassin will either be driven away without completing the job, or killed in the event that they are caught in the act.

- Right-click on a settlement, army or agent to make an Assassination attempt. The chance of success will be shown on a panel – press the Assassinate button to proceed.
- **Subterfuge rating.** An Assassin's Subterfuge rating directly affects their chances of assassinating a target successfully.
- **Assassination traits.** Some traits that an Assassin can earn will improve or worsen the chances of success for assassination.
- **Act of war.** Unlike most agent actions, if caught, an assassination attempt will be counted as an act of war. If the Assassin succeeds however, the enemy is none the wiser – secrecy is part of the success.

Sabotage – Active ability

Sabotage works much like Assassination, except that the target is always a building in a settlement. Success means the targeted building is destroyed, and their faction will be unaware as to who was responsible. Failure will mean that the Assassin will either be driven away without completing the job, or killed in the event that they are caught in the act.

- Right-click on a settlement to make a Sabotage attempt. The chance of success will be shown on a panel, if not click on the "Sabotage" tab – press the Sabotage button to proceed.
- **Subterfuge Rating.** An Assassin's Subterfuge rating directly affects their chances of sabotaging a building successfully.
- **Sabotage Traits.** Some traits that an Assassin can earn will improve or worsen the chances of success for assassination.

- **Act of war.** Sabotage is an act of war, with similar consequences as described under assassination, should the assassin be caught.

Stealth – Passive ability

Assassins use Stealth in exactly the same way that Spies do (see [Using Spies](#)).

Using Diplomats

Diplomacy – Active ability

Diplomacy is the act of negotiating with other factions in **Medieval II: Total War**, and is very different to all other agent actions – It is covered in its own section of the manual (see [DIPLOMACY](#)).

- **Right-click** on an army, character or settlement to enter diplomacy with them.
- **Influence rating.** A Diplomat's Influence rating has an effect on his chances of making successful proposals during diplomacy.
- **Able to bribe.** Diplomats can attempt to bribe foreigners over into their own faction's service during diplomacy. No other character can do this.
- Only Generals, Captains, Settlements and other Diplomats can actually be approached to make a diplomatic proposal. All other character types can only be approached for bribery, and some characters cannot be bribed at all, such as Princesses, Faction Leaders and Faction Heirs.

Using Princesses

Marriage – Active ability

This is a special kind of marriage, where the Princess attempts to marry a General – either a General from her own faction, or a foreign General. If the General is from her own faction, he will always accept. If she succeeds in marrying a foreign General he will leave his faction to join hers. If she fails, she will either continue to serve her people, or be disgraced and never to be heard from again.

Diplomacy – Active ability

Princesses use Diplomacy in exactly the same way Diplomats do, except:

- After **Right-clicking** on a General to make a Marriage attempt. The chance of success will be shown on a panel – press the **Marriage button** to proceed.
- **Charm rating.** A Princess's Charm rating directly affects her chances of making a successful marriage attempt. If the General is from another faction, his Loyalty rating also has an effect on the chances of success.
- Princesses cannot attempt to marry Generals from an Islamic faction (Egypt, Turks, Moors) or factions that do not have Princesses.
- A General who marries a Princess receives a Loyalty rating bonus, making him less susceptible to bribery and thoughts of rebellion.

Diplomacy – Active ability

Princesses use Diplomacy in exactly the same way Diplomats do, except:

- After **Right-clicking** on a character or settlement from another faction, a list of suitable marriage targets is presented. Press the **Enter Diplomacy** button on the bottom of the panel to initiate diplomacy instead.
- **Princesses cannot bribe.** Unlike Diplomats, a Princess cannot attempt to bribe other characters during diplomacy. They can however enter a marriage alliance.
- **Charm rating.** A Princess's Charm rating has an effect on her chances of making successful proposals during Diplomacy.

RELIGION

Religion in Medieval II: Total War

Although your victory conditions in the Grand Campaign do not involve any religious goals, religion is something that you must treat with respect, even as the ruler of a vast empire. Faith played an enormous role in both daily life and politics in the medieval era, and this is represented in the Grand Campaign.

Your basic concerns with religion are:

- Ensuring your religion is dominant in your regions.
- Ensuring Heresy does not get out of hand in your regions.
- Considering how your actions may affect your relationship with other factions of your religion, or the Pope.

Spreading Your Faith

To ensure that your lands are free of religious problems, you will need to invest some money in building **Churches** or **Masjids**, and also in recruiting Priests or Imams. Churches and Masjids will help their faith spread so that a percentage of the population that follows other religions will change to your faction's religion. Priests and Imams have the same effect in the regions that they stand in.

- You can check the religious breakdown of the population of a region by looking at its **Settlement Details Scroll**.
- It can be advantageous to send a Priest or Imam into a region you plan to conquer if the population there has a different religion to your faction. This is not considered an act of war or diplomatic transgression.
- A Heretic will spread Heresy in the regions they enter in the same way a Priest or Imam spreads their religion.

The Pope

The Pope is the head of the Catholic Church, and the **Leader** of the Papal States, which are the lands belonging to the Church. As an individual with a huge amount of power, the Pope's personality will have an effect on all of Christendom. He may believe in "holy" war against the people of other religions, or he could abhor violence altogether. He may also be a shining example of righteous beliefs, or corrupted by the power his position has afforded him.

It is also important to note that the Pope was once but a humble Priest. The experiences during a Priest's life will have an effect on what sort of spiritual leader he will become should he one day be elected as Pope.

- To see an overview of the current Pope, click the **Faction button** on the **Control Panel**, then click on The Pope tab at the top of the scroll.
- The Pope's age, plus anything known about the Pope's personality can be found beside the Pope's portrait.
- Click on this button, left of the Pope's portrait to request that he call a Crusade (see [CRUSADES & JIHADS](#) below).
- The columns of crosses in the lower part of the **Pope Overview Scroll** represent the Pope's view of the Catholic factions. The more crosses, the more he respects and admires that faction.

Excommunication & Reconciliation

The reason that maintaining a healthy relationship with the Pope is so important for Catholic factions is that if he deems that a Catholic Faction Leader is behaving poorly, does not support the faith properly or is actively opposing him, he may **excommunicate** the Faction Leader in question.

When the Pope excommunicates a faction, it is only the leader that he has a problem with. However, this is no consolation for the people of that faction who are still cut off from the

Pope, their spiritual leader. In fact, when a Faction Leader is excommunicated, his people will be upset with him for allowing problems with the Catholic Church to go so far, rather than annoyed at the Pope for excommunicating them in the first place. **Reconciliation** is when the Pope "forgives" the faction that he had excommunicated, and is the opposite of excommunication.

- Both your population and your Generals will not be pleased about your faction being excommunicated. It may lead to public order issues and rebelling Generals.
- An excommunicated faction will not receive any missions from the Pope.
- An excommunicated faction may have a Crusade called against it.
- Catholic factions can attack an excommunicated faction without fear of repercussions from the Pope.
- It is possible to request to reconcile with the Pope during diplomatic negotiations with the Papal States. There is also a chance the Papal States will offer reconciliation as well.
- Excommunication is a personal thing between the Pope and a Faction Leader. If the Faction Leader dies, or a new Pope is elected, the Pope may decide to reconcile the faction again.

The Papal States

The Papal States still exist today in the modern era, as the "Vatican City." In **Medieval II: Total War**, the Papal States are considerably larger, and work like a normal Catholic faction in most regards. However, there are some very important differences as to how the Papal States works that you will need to be aware of when you're thinking of dealing with them:

- **The Papal States cannot be wiped out, ever.** If they lose their last settlement, the Catholic Church will seek out a new home for the Papacy, and will even ask Catholic factions to grant them a region. Obviously, that will have a massive positive effect with that faction's relations with the Pope and the Papal States.
- Attacking the Papal States is almost certain to bring the wrath of all Catholic factions upon you... and there are a lot of them, so think twice about choosing the Papal States as an enemy.
- The Papal States do not have a family tree. Instead the Pope is its Faction Leader and the **Cardinals** (see below) are the potential "heirs."

The College of Cardinals

The Catholic Church has a council of the highest ranked Priests within the faith, called Cardinals. These men form a collective called the College of Cardinals, of which there are never more than thirteen.

- Click on this button at the bottom of the **Overview Scroll** to bring up the **College of Cardinals Scroll**. This shows who the current Cardinals are, and where they are from.
- A Catholic Priest must have a sufficiently high Piety rating to be considered for promotion to a Cardinal by the Pope.
- The College of Cardinals does not have to have all thirteen seats filled. If there are not enough Catholic Priests in the game of sufficient Piety, then there will be fewer Cardinals.
- Cardinals are immune to the effects of Heresy, and can never become a Heretic character. This makes them extremely useful at getting rid of Heretics from the campaign map.
- When the Pope dies, a new Pope will be elected from the College of Cardinals (covered below).

Papal Elections

When the Pope dies the College of Cardinals will convene for a Papal election to elect a new Pope. This is a moment where the rulers of the Catholic factions have an opportunity to seriously improve their relations with the Papacy.

There are only ever a maximum of three candidates for the Papacy – these men are called the **Preferati**. Any faction that has a Cardinal can vote in the Papal election. Even though you can simply vote and see the results, there are opportunities here to wheel and deal with other factions in an effort to control the outcome of the election.

- The Papal Election Scroll will only appear when the election takes place and you have a Cardinal to give your faction a vote.
- The faction of each Preferati is shown beside their portrait. Faction symbols to the right of that show which factions are known to support that candidate. Mouse over any of these shields for extra information about this faction in a tooltip.
- Click on this **button** to the right of a Cardinal you wish to vote for.
- Click on one of the **Faction shield buttons** along the bottom of the scroll to enter diplomacy with that faction.

Election Results

It is good to have a sound understanding of the results of a Papal election, because voting for the loser could have a negative effect on your relationship with the Papacy. It may not always be in your best interests to back an ally if they will lose:

- The Preferati with the most votes becomes the new Pope.
- Preferati from other factions will always vote for themselves in the election.
- If there is a tie for votes, the Preferati with the highest Piety rating will win. If there is a tie for Piety as well, the Preferati from the faction with the best relationship with the Papal States will win.
- Factions that voted for the winner will have their relations with the Papal States improved.
- Factions that voted for someone other than the winner will have their relations with the Papal States worsened.

Special Religious Agents

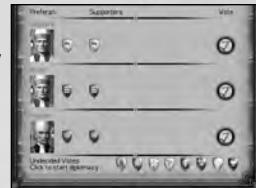

There are two sorts of blasphemous characters that wander the campaign map, leaving a trail of strife and spiritual unrest in their wake – Heretics and Witches. Both of them encourage the spread of **Heresy** in any region that they stand in, but have their own unique effects as well.

Heretics

A Heretic is a man of faith who has adopted a different take on one of the major religions, or has even attempted to forge an entirely new one of his own will. He is utterly convinced that what he is doing is correct, but he is also aware that the major religions find his attempts to spread a message of faith other than their own to be blasphemous.

- Heretics may appear suddenly in regions with high Heresy.
- Heretics spread Heresy in the regions they are in.
- Heretics can be denounced by a Priest or Imam.
- Heretics have a chance to convert a Priest into a Heretic should the Priest fail to denounce him.

Witches

A **Witch** is a woman believed to have magical powers, granted to her through the practice of foul, blasphemous arts. Once a woman is deemed a Witch, she is essentially an outcast, being forced to wander in an effort to escape religious authorities that would seek to end her heretical practices.

- Witches may appear suddenly in regions with high Heresy.
- Witches spread Heresy in the regions they are in.
- Witches move about the campaign map, approaching people of interest.
- Generals approached by a Witch may end up being cursed... Or at least believing that they have been stricken by some unholy affliction.
- The higher a Witch's Magic rating, the more likely she is to curse a General.
- Witches can be denounced by a Priest or Imam.
- Witches have a chance to kill a Priest if he fails to denounce her... At least that's what the peasants will report happened.

Inquisitors

An **Inquisitor** is a special sort of Priest, sent by the Catholic Church to deal with Heresy when it becomes a serious problem in the Pope's eyes. These men are charged with the right to attempt to denounce any man or woman they suspect of blasphemous behavior through a trial for Heresy – including your Generals, or even your Faction Leader! It is definitely better to avoid having an Inquisitor coming to visit in the first place than finding a way to get rid of them once they are there.

- Inquisitors work like a Catholic Priest in that they spread the Catholic faith throughout the regions they travel through.
- Although an Inquisitor can attempt to denounce Generals and agents, they will move to Heretics and Witches first – the obvious purveyors of Heresy.
- Inquisitors also work like a Priest in that their Piety rating directly affects their chances of denouncing a character, regardless whether they are a General, Heretic or Witch.
- A General's Piety rating directly affects his chances of surviving an Inquisitor's denunciation attempt.
- An Inquisitor can be assassinated, but be aware that he represents the Papal States, and there may be serious consequences for attempting this.

CRUSADES & JIHADS**Crusades**

A Crusade is a religious quest, a holy war undertaken with Papal sanction. The mission statement of those who join is to capture a certain settlement in the name of Christendom. This could be because the place is rife with Heresy, or because there is a Catholic population there that requires some spiritual rescue in his Holiness's eyes. Sometimes the Pope will call a Crusade on his own initiative, but he is also open to suggestion from the Catholic Faction Leaders.

Being a religious cause, Crusades inspire men to push themselves far beyond their normal capabilities. Once a Crusade has been called, it is up to Catholic Generals to take up the cause and lead their zealous soldiers to victory in God's name. Any man who can lead a successful assault on a settlement targeted by a Crusade will be the toast of Christendom for years to come!

Requesting Crusades

A Crusade is an incredibly serious event, and not something that the Pope will approve lightly – After all, he is essentially asking the able bodied men of Christendom to travel a great distance and potentially give their lives for this cause. Here are some things to know about requesting a Crusade:

- You can request that the Pope call a Crusade via the **Pope Overview Scroll**. (see **The Pope**) You must then select a Crusade target settlement before the Pope accepts or rejects your request.

- The chances of the Pope agreeing to a Crusade request are strongly affected by the Pope's relationship with the faction that makes the request.
- The greater the percentage of the population taken to Heresy in a settlement, the more likely the Pope will approve a Crusade there.
- The larger the Catholic population in a settlement owned by a non-Catholic faction, the more likely the Pope will approve a Crusade there.

Joining or Leaving a Crusade

Because there are some serious penalties and benefits for an army on a Crusade, it is important to know how to join a Crusade:

- There is a time limit within which to join a Crusade.

- All Catholic Generals have the option to join a Crusade, provided that their faction is not excommunicated.
- To have a General join a Crusade, he must first be outside of a settlement, and have at least 8 units in his army. Then *double-click* on him to open his **Army Details Scroll**, and *click* on the "**Join the Crusade**" button at the bottom of the scroll.

- This Crusade marker will appear at the top of a Crusading army's banner.
- It is possible for a General to abandon the Crusade, although doing so will cause his units to begin deserting. This can cause the loss of a huge military force, so be very careful!

Crusading Army Effects

Once a General has joined a Crusade, his army experiences the following effects:

- Crusading armies can move at twice their normal movement rate.
- Crusading armies do not pay any upkeep for their units.
- There are special units that are only available to Crusading armies. If a Crusading General attempts to hire mercenaries, he may see new units available that wish to join the Crusade for a nominal fee.
- If a Crusading army does not make sufficient progress towards the Crusade target each and every turn, it will begin to lose troops to desertion. These men are utterly committed to the cause, and will not wait to serve a man that lacks their conviction.
- If a unit in a Crusading army is ordered out of the army, then it will vanish after one turn, disgusted at being asked to abandon their holy cause. The only exception to this is when a Crusading army captures a city, it may leave units there to form a new garrison.

Ending Crusades

Crusades can end several ways:

- A Crusade succeeds when a Crusading army successfully captures the target settlement of the Crusade.
- A Crusade fails if no Generals have joined the Crusade within the time limit to join.
- If the target settlement belongs to an excommunicated faction and it reconciles, the Crusade ends peacefully.
- If the target settlement falls to a Christian army not on Crusade, then the Crusade ends uneventfully.
- Factions that participate in a Crusade can receive a variety of rewards, depending upon their involvement. Simply participating can earn positive rewards, even if another faction is the one that takes the target settlement.

Jihads

A **Jihad** is a Muslim Holy War against the infidels that would make themselves the enemies of Islam. Jihads have almost identical effects to a Crusade, however the way that they are called is very different. Since there is no singular spiritual leader within Islam, Muslim Faction Leaders do not have to seek someone else's approval to call a Jihad.

- Any Islamic faction that has an Imam with a sufficient Piety rating can call one. *Click* on the "**Declare a Jihad**" button at the bottom of the Imam's **Character Information Scroll**

- Islamic Generals join a Jihad in exactly the same way that a Catholic General joins a Crusade, via the **“Join the Jihad”** button on their **Army Details Scroll**.
- A Jihad army experiences exactly the same restrictions, bonuses and effects that a Crusading army does.
- Jihads end for exactly the same reasons as a Crusade, except that there is no equivalent of excommunication.

DIPLOMACY

Although it might be your destiny to conquer the known world, your faction is but one of many in the Grand Campaign. Sometimes it will be better to attempt to deal with other factions in a more civilized manner to further your plans of conquest. This is where diplomacy comes in.

Diplomacy in the Grand Campaign works by a system of proposals. One faction makes a proposal of some sort, and the other faction accepts, refuses or counters it. Choosing to counter is the way to haggle in negotiations.

Throughout diplomacy you will hear the other party speak to you, and their tone will help give you an idea about what they thought of the last thing you proposed to them. It is quite possible to insult someone badly enough to make their faction think less of you; should you push things too far...

The Diplomacy Scroll

Once you enter Diplomacy, there is plenty of information made available to you about your faction, the other faction and the individual you are negotiating with, and the proposals you make yourself.

- Your faction's details, and the items you can put into a proposal are shown in the panel on the left hand side of the **Diplomacy Scroll**.
- The other faction's details, including a display of their enemies and allies, as well as any treaties you have with them, are shown in the panel on the right hand side of the **Diplomacy Scroll**.
- Your current stance of allied, neutral or at war with the other faction, and the number of turns that this has been the case is displayed at the top of the scroll.
- The speech bubble shows what the other faction has to say to you throughout the negotiations. Some of this will come as actual speech.
- The Demeanor display below the speech bubble will give a description to confirm what the speech you heard was implying.
- The two negotiators will have their name and diplomacy-related attribute shown.
- **Details: Relations** – This represents the relationship you have with the other faction.
- **Details: Reputation** – This represents this faction's reputation throughout the world. Fractions that break treaties become known for it.
- **Details: Power** – This faction's total military might, including that of their allies. It may well be worth considering who has the most ability to back their threats.
- **Details: Wealth** – For your faction, your treasury value is shown. Thinking about what the other faction can afford is worth factoring into your proposals.
- **Details: Priorities** – If you happen to have an insight into what the other faction may want from at this moment, it will be displayed here.
- **Private Dealings: Bribe** – If this is shown, you have the option to bribe the army, settlement or individual you are dealing with.
- **Make Offer** – The items listed here are things you can offer in your proposals. Some items may or may not be much of an actual offer, depending on the circumstances.
- **Make Demand** – The items listed here are things you can ask from the other faction in your proposals. It may or may not actually be demanding to propose these.
- **Make Declaration** – The items listed here are treaties that you can cancel, by putting

them into a “proposal.”

- The center scroll is where you actually form proposals, and the items you include in a **proposal** are shown here.
- The **buttons** below the scroll select how you put the proposal forward – as a **gift**, a **proposal**, or a **declaration** that you are cancelling a treaty.

Demeanor - Reading their Reaction

A large part of negotiating is figuring out what the people you're dealing with are thinking, or are prepared to accept – This is where **Demeanor** comes in.

When you start diplomacy, the first demeanor reaction you receive from the other party will be a greeting, which will vary depending on whether or not you were at war, allied, or neutral. From that point on, all demeanor reactions you hear and see on the demeanor display will be relating the reaction to the last proposal you made.

Making Proposals & Declarations

The center scroll shows the proposal that you are going to put forward. You build up a treaty by selecting items from the two lists to the side of the scroll:

- Click on items under the “Make Offer” heading in the left hand column to add them as **offers** in the proposal. These are things that you’re willing to give to the other party, including land, cash, information, military support or access, an alliance, and other such things.
- Click on items under the “Make Demands” heading in the left hand column to add them to the proposal as **demands** from your opposite number.
- Click on items under the “Make Declarations” heading in the left hand column to add them to the proposal – although this is not a proposal, but rather a declaration that you are ending a treaty.
- Click on an item already in the proposal to remove it.
- As you add and remove items, you can see the “Proposal Balance” shown beneath the offers and demands you have added to the proposal.
- Proposals do not have to be balanced, but you’ll find proposals that are obviously imbalanced in your favor are rejected more often than proposals that offer the other faction something genuine.

Make offer

- Click the **Make Offer** button below the proposal text. Your opposite number will then respond. He will do one of three things: **refuse** outright, **accept** immediately or **make a counter-offer**.

- If you’re simply offering money, territory or map information and not asking for anything in return, you can offer these as a **gift** to the other faction. This will usually make the other faction see your people in a better light.
- When you want to bring an end to a treaty you have with another faction, such as taking away their military access or breaking an alliance, you can do so by selecting these items under the “Make declaration”, and then clicking on the **Cancel Treaty** button instead of making an offer.
- It’s quite possible that your proposed treaty was interesting, but not quite what the opposition wanted. In this case, observe their demeanor as they make a **counter-offer** to you. The demeanor will help you get an idea of how close you were to success.
- Once a counter offer treaty is on the table, you can accept it or make your own proposals in response as a **counter offer**. Again, you can change the treaty by clicking on either the offers, the demands, and on the proposal scroll itself.
- It’s quite possible for negotiations to go through several rounds of offer and **counter offer** before a deal is reached. Be mindful, though, that not everyone’s patience is endless and one man’s haggling is another man’s waste of time!
- If you make an offer or demand without adding the other type, click the **Make Offer** button. You will be asking the other party what it would take for them to accept what you’ve suggested.

Proposal Items

The items available on the left that you can enter as offers, demands or private dealings will change depending upon what situations are available. Here are some things to know about special situations and proposals:

- Offering Trade Rights is an ideal first proposal for neutral factions.
- Only a Diplomat can attempt to bribe a settlement, army or character.
- Only a Princess can offer herself in a marriage alliance, and she can also be approached personally for one as well. A marriage alliance is serious, and both parties are expected to honor the deal.
- Military Access means granting passage through a faction's lands, without it any longer being considered a hostile action.
- If you are negotiating for Papal election votes, relevant offers and demands will appear here.

Proposal Balance

The "Proposal Balance" displayed at the bottom of the proposal scroll is a very useful tool in that it lets you know how generous or demanding your suggestion is. The information shown relates how balanced the proposal is on raw terms – in other words, without considering the situations for both parties. Thus, what normally may be generous may be unappealing to the faction you are dealing with now.

MANAGING YOUR EMPIRE

In the Grand Campaign, you will discover that as your empire becomes larger and more powerful, it will also become a more unruly beast for you to tame. You will have to deal with increasing numbers of enemies, the prospect of rebellion within your realm, deaths in your ruling family, and much more!

This section of the manual covers how to get a grip on your faction's empire - from knowing where all your forces are through to who your allies and enemies are.

The Family Overview Scroll

Click on this button to get an overview of your faction. The **Family Overview Scroll** displays some information about your faction, and opens access to other scrolls relating to your faction's state:

- A host of information and stats about your faction, from who your greatest General is, through to what year it is and your victory conditions.
- Access the automanage controls which allow you to have either the taxes or construction in your settlements managed by the AI. There is also a slider to adjust the spending policies when using automanage.
- Tabs that open other overview scrolls, such as the **Diplomacy Overview** where you can see the current stances for all known factions in the campaign at present.

- Click on this button to view your **Family Tree Scroll**.

- Click on this button to view the **Faction Rankings Scroll**.

- Click on this button to view your **Rosters Scroll**.

- Click on this button to view the **College of Cardinals Scroll**.

The Family Tree Scroll

The **Family Tree Scroll** shows all the important characters in your faction—the men who can be Generals and Governors, as well as your noble daughters who will become Princesses.

- Portraits in color are living characters; those characters shown in grey are dead.
- The two most important characters are the **Faction Leader** and the immediate **Faction Heir**, and the status of these two is marked on their portraits. The Faction Leader is always the most senior General in any army, regardless of actual Command ratings.
- All the larger portraits are characters in your faction that you can use in the campaign now. Move the cursor over a portrait to see the character's name and abilities displayed at the bottom of the scroll.
- Select one of the larger portraits by *clicking* on it and then *click* on the "Show Me" button to reveal character's location on the campaign map.
- The smaller portraits are wives or children who have not yet come of age.

New Family Members

During the Grand Campaign you will have characters and family members die, but you will also have new members join the ranks of your ruling family. Sometimes your direct actions will expand or change your family tree, while other times promising Generals, keen suitors or women of noble breeding may be presented to you, seeking to join your nobility. Ways to join your Family Tree include:

- **Being born in.** Characters born into your Family Tree become either a General or a Princess when they come of age, depending on their gender. They may have traits as a result of their parents' influence.
- **Being married in.** Characters can join your family by marrying someone in your Family Tree. This may be a direct result of the player's actions, such as attempting to marry a General with a Princess, or seal a marriage alliance in diplomacy. It could also be because a suitable husband or wife has become available.
- **Being adopted in.** Characters that lack their own children may choose to adopt a younger man and make him his ward, someone that they would be prepared to have serve his family's interests, and potentially name as a potential successor to their wealth and estates.
- **Bribed characters do not join the family.** It is important to note that bribing a General does not actually bring him into the family tree of his new faction. The only way that these Generals may join the family is by being married to a Princess within the faction, and this is limited to European factions.

The Faction Rankings Scroll

This scroll gives you a way of seeing your progress in the game, and comparing your strength with that of your rivals in several different ways. The graph shows your faction's power over time as an absolute value; it does not show the proportion of the world's "power" that you control.

- The ranking choice allows you to choose an aspect of your faction's power: production, territorial, financial, population and overall.
- The faction choice lets you choose which collection of factions you wish to compare: your own, all factions, the top five, neighboring factions and a custom selection.
- You can use the faction symbols to toggle the graph lines on and off for any particular faction(s). This can be very useful when reviewing your progress in a war.

The Rosters Scroll

The Rosters Scroll is actually three roster lists rolled into one location. You can access the rosters either via the **button** at the bottom of the **Faction Overview Scroll**, or by *right-clicking* on the tabs at the top of the **Review Panel**:

- **Military Forces Roster.** This roster lists the Generals, Admirals and **Captains** for your faction. It also displays their attributes, their status and location, and how many soldiers they have under their command.
- **Settlements Roster.** This roster lists the settlements for your faction. It shows the level of settlement, population, public order, income, Governor (if any) and icons to flag when construction or recruitment are taking place.
- **Agents Roster.** This roster lists all the agents in service for your faction. Also displayed are their attributes, their character type, and where they are located.

Your Job as Faction Leader

There are countless options as to what you can do in the Grand Campaign, and it would be incorrect to say that you have to touch on everything to succeed. In fact, the more focused your actions, the more effective they are.

These are the primary tasks you have as the ruler of your faction:

- **Ensure you have enough troops.** To conquer other lands and defend your own, you will need armies and garrisons. It is up to you to ensure that your empire has the facilities to recruit these units.
- **Ensure you have enough money.** Without finances you will find that there is very little chance of success in the Grand Campaign. Money may not be one of your goals, but it will be required to reach them.
- **Deal with other factions.** The agreements you make with other factions can have a huge effect on your situation. An aggressive allied faction can drag you into huge conflicts, or a timid one might not back you sufficiently when you could use their help.
- **Deal with threats of rebellion.** Good leaders find out about trouble within their own ranks before it happens. Keep an eye on your Generals and settlements to see if they are loyal and content.
- **Plan conquests.** You will need to have an idea of what's going on both in your lands, and those beyond your borders so you know where the opportunities lie to expand your empire.

How to Make Money

There are several ways to make money for your faction in the Grand Campaign, though it is important to know that doing some of these things may have other repercussions.

These are some of the basic ways to improve the amount of money your faction is generating:

- **Establish trade rights.** Send your Diplomats and Princesses out to establish trade rights with everyone you can.
- **Increase your tax rates.** Just ensure you're not going to send your settlements into a state of riot and unrest by doing so.
- **Construct buildings that improve trade income.** Constructing trade buildings may cost money, but they pay themselves off over time and then make your settlements more profitable.
- **Disband surplus units.** Most troops require that you pay them an upkeep cost each turn. If you are keeping units you will never put into action, disbanding them will help cut down your military expenditure.
- **Ransom Prisoners.** When you fight battles, attempt to capture lots of prisoners and then ransom them back to the enemy.
- **Use Merchants.** The amount of money that you can generate from sending Merchants out onto valuable trade resources can be significant.

Rebellion

Not everybody is content to remain a servant, and there may be times that you are faced with characters, armies or settlements that actually rebel against you. This is usually

because they are either disloyal to begin with, or are in a position where their loyalty is being strained.

How to Deal with Loyalty & Rebellion

There are several ways to prevent rebellion; having to recapture a settlement or lose a General who you were counting on can be a true setback. Here are some ways you can avoid rebellion:

- **Marry a Princess to a General.** This will boost his loyalty significantly.
- **Don't leave Generals stranded.** If you leave a General to fight in very difficult odds, he won't appreciate it. Ensure they have the troops they need to not be in too much danger.
- **Keep disloyal Generals close.** Generals with a loyalty problem should be kept close. If you send them far away, they are more likely to become rebellious.
- **Keep the people happy.** Try and build everything you can to improve the settlements you have, install Governors where there are issues and having a decent garrison of units helps there.

BATTLES IN MEDIEVAL II: TOTAL WAR

How Battles work in Total War

Realistic large-scale conflicts are what **Total War** battles are all about. Unlike many real-time strategy games where you can continually recruit troops during battle and use sheer numbers to overwhelm your opponent, battles in **Medieval II: Total War** involve using the same sorts of tactics for field and siege warfare that commanders of the period had to master themselves.

As a commander you'll be doing things like:

- Making sure your units are organized and positioned to do their job.
- Looking to the terrain for places where you can use one unit to hold back many enemies, or higher ground to defend and shoot from.
- Choosing the right units to do the job. You don't want to send cavalry charging into a row of spears formed into a wall of spikes for example.
- Paying attention to what the enemy is doing, and moving to counter his plans.
- Looking for opportunities to outnumber and outflank enemy units to take enemies down more easily.
- Ensuring that you don't let your men get too exhausted or break their morale. Your men are no good to you if they are spent, or running for their lives!
- Using your Generals (if present) to rally troops and influence the battle.

The Battle Deployment Scroll

When you have an army selected on the campaign map *right-click* on an enemy army or settlement to attack.

This will bring up the **Battle Deployment Scroll**:

- The strength comparison bar in the center of the scroll gives you the overall battle odds. Move the cursor over the crossed swords to see the exact odds.
- Reinforcements are also listed (and taken into account in the odds calculation). These are drawn from armies that are adjacent to the site of the battle or siege.
- *Click here* to take control of your units on the battlefield.
- You can have the game work out the result. Auto-resolving a battle is speedy, but your tactical skill is obviously not taken into account. Casualties may be heavy, and you can't protect valuable Generals.
- *Click here* to cancel the battle. If the other army was the attacker, your force will withdraw a short distance to a safer position.

Attackers & Defenders

In every campaign battle there is an **attacking** army and a **defending** army. During sieges the besieging army is usually the attacker. The only exception to this is when the defenders sally out, or a relief force attacks the besiegers. In this case the besieging army is the defender. Attacking and defending armies have different **victory conditions** in battle and have different deployment rules.

How to Win Battles

Generally speaking, in a field battle you need to drive the enemy from the battlefield in order to win. You can press the **ESC key** at any time to end a battle.

- This may involve killing many enemy troops, although a crisis of morale (the death of a General, for example) will make the enemy flee the battle.
- As an **attacker**, there is a time limit. If you haven't defeated the enemy before the timer expires, you lose the battle.
- As a **defender**, the timer works in your favor. Remain on the field until it runs out and the attacker is automatically defeated.
- During a **siege battle**, victory is determined by control of the central square or plaza in the settlement. The attackers must take this square before the timer expires.
- During a battle you can press the **F1** key to see information about the battle, including the victory conditions.

Deploying Your Units for Battle

At the start of the battle you may be given a chance to deploy your troops. The rules of deployment work as follows:

- As an **attacker** your army will always deploy on a section of the battlefield that matches the line of its approach. March onto a battlefield from the north, and that's where your forces will deploy. There is an exception to this in siege battles, where you will approach from the side of the settlement that has a gate.
- As a **defender**, you'll deploy in a complementary area of the battlefield.
- Units must be positioned within the boundaries of your deployment zone. This is the area on the map bordered by your faction color.
- If you are ambushed, then you will not be able to manually deploy your units at all.
- **Reinforcements** always appear on the edge of the battlefield that matches their position on the campaign map. It can be very worthwhile, for example, to position supporting armies on the campaign map on the flanks or in the rear of an enemy position before you attack.

Placing Units During Deployment

There are several controls to understand so that you can actually deploy your units in a sensible manner:

- Click on a unit or its **card** in the **Control Panel**, and then *right-click* on the ground you want it to occupy.
- You can select multiple units for deployment.
 - Hold down the **CTRL** key and *click* on the units (on the battlefield) or unit cards (in the Control Panel) you wish to select.
 - Hold down **CTRL** and *double-click* on a unit card (in the Control Panel) to select all units of the same type in your army.
 - *Click-and-drag* on the battlefield to have a yellow box around the units you wish to select. All units surrounded in this fashion will be selected.
 - If you select one card then hold down shift and *click* on another card, then it will select all cards in between.
- You can deploy multiple units by *right-clicking* on the ground you want them to occupy. You can also *right-click-and-drag* the units out as a line.

The Battle View & HUD

What you see on screen during a battle can be divided into four main sections:

- **The Battlefield View.** The actual display of the battlefield. Much of the controls in battle involve *clicking* on the actual men and terrain.
- **The Battle Mini-map.** On the left are the mini-map and game speed controls.
- **The Battle Review Panel.** In the center are the unit cards, each of which represents one of your units on the battlefield.
- **The Battle Control Panel.** On the right are the controls for individual units, groups of units and the army as a whole.

The Battlefield View

Medieval II: Total War's battlefield offers a realistic and direct take on what's happening in the battle itself, but when there's a lot happening, being able to recognize exactly what everything is can be vital:

- You can *click* on the large banner to select the unit – this can be quite useful in the middle of tense hand-to-hand fighting. Different shaped banners are shown for different classes of unit (eg. Cavalry and infantry use different banners).
- Some units also carry smaller flags showing your faction color and symbol. These show a combination of its experience and upgrades to weaponry and armor.
- Terrain has exactly the effects you would expect in real life: marching through snow is tiring, as is marching up hill; charging downhill is more effective than charging uphill; positioning artillery and archers atop hills and cliffs gives them a range bonus and clear shot, etc.
- Weather also has realistic effects: A blazing sun will heat plate armor; fog will obscure or even hide units at a distance and rain will make missile fire less accurate, etc.
- The out-of-bounds area of the map is marked by a bright red line that is visible when the camera is close to the battlefield's edge. Units cannot be ordered beyond this line, although they will go there if running away or withdrawing.

The Battle Control Panel

There are two sets of buttons to use on the **Battle Control Panel** – Unit controls, and Group controls:

Unit Controls

- *Clicking* on the portrait of your commanding General or Captain immediately moves the camera to a position behind the Generals' unit.

- *Click* here to **cancel** the current orders being carried out by the selected unit(s). You can also press the **Backspace** key for the same effect.

- *Click* here to make the selected unit(s) **withdraw** from battle in good order. The units will retreat into the out of bounds area of the map. A unit that is given withdrawal orders can be stopped and recalled to the fight up until the point it leaves play.

- *Click* here to toggle the **unit formation** from "tight" to "loose." This alters the spacing between men within the selected unit(s).

- *Click* here when a unit is selected to toggle the unit's **movement speed** between walking and running. A unit that runs will tire more quickly than one that marches at a steady pace.

- *Click* here to set the selected unit(s) to **guard** mode. When this is toggled on the unit(s) hold position and formation at all costs, and let the enemy come to them. A unit on guard will not pursue fleeing enemies. This can be useful for holding an important location (such as a gateway).

- Click here to toggle **skirmish** mode on and off. A missile unit set to skirmish will seek to keep a safe distance between itself and the enemy (usually the range of its missile weapons). If a unit cannot skirmish this button will be greyed out.
- Click here to toggle **Fire at will** mode on or off. When this is on selected missile-armed units will fire at nearby targets without further orders. When a unit without missiles is selected this button will be greyed out and unavailable.
- These **buttons** are reserved for a variety of **special abilities**, depending on the type of unit currently selected. See [Using Special Abilities](#).
- This displays the number of prisoners you have captured during the battle.

Group Controls

- When a group of units is selected *click here* to bring up the **Group formations buttons**.
- Click this **button** to **group** the selected units. This button is greyed out unless multiple units have been selected.
- Click this **button** to toggle **CPU control** for the group, and the game will independently issue orders to the units once you have given the group some orders.

The Battle Review Panel

Each of the **cards** in this section represents one **unit** on the battlefield. When a card is highlighted all men in the unit on the battlefield are highlighted with a circle, and an arrow showing the direction they are facing.

- The number is the current number of men in the unit. The artwork on the card shows the unit type.
- Large portrait unit cards are always Generals accompanied by their bodyguards. A gold star on the unit card identifies the commanding general in battle. Any other generals have a silver star.
- Units that have gained experience and/or improved weapons or armor have this shown on the unit card as chevrons, swords and/or shield markers.
- All units that are armed with missile weapons have a bar across the bottom of the card that shows their current **ammunition status**. This bar always starts full, and as the unit fires missiles the bar empties.
- Artillery units have an ammunition status bar, just like other missile units. The number on the card is the **number of men** in the unit, not the number of artillery pieces. Each artillery piece requires a minimum number of men to crew it.
- Units can be **grouped** together during battle. By *clicking* on the tab all the units in the group can be selected and controlled as one.
- Unit cards can have action icons superimposed to show what the unit is currently doing (covered below).

States & Effects on Units in Battle

The unit cards in the control panel also give you a way of monitoring what your units are doing without having to dash to each one in turn. Each unit card can have a superimposed symbol as "shorthand" notification of what is happening to the unit:

- When a unit **takes casualties** the number of men in the unit shown on the unit card will turn red.

- A single arrowhead at the top of the card shows that the unit is moving at a steady **march** towards its ordered destination.

- A double arrowhead at the top of the card shows that the unit is moving towards its ordered destination at the run, or is **charging** an enemy unit and is yet to make contact.

- Crossed swords show that the unit is engaged in **hand-to-hand combat**.

- A bow and arrow symbol shows that the unit is **firing missiles**. (This symbol is used even if the unit is using ammo other than arrows).

- Arrows show that the unit is **under fire**. It may be worth moving the unit out of range or ordering it to attack its tormentors!

- This symbol shows that the unit is currently **hiding** and may not be spotted by enemy forces.

- The white flag symbol shows that the unit has suffered a morale crisis and is now **routing**: running from the enemy. The unit banner also changes to white on the battlefield. It may be possible for a General to rally troops that are routing.

- These symbols only appear on unit cards during sieges. To find out more see [SIEGES & SIEGE BATTLES](#).

It's quite possible for more than one of these symbols to apply at any one time. If this is the case, the symbols that apply are displayed in turn.

The Battle Mini-map

The mini-map gives you a view directly down onto the battlefield. Terrain on the battlefield is taken from the campaign map location. You'll see distant mountains and bodies of water in the correct places beyond the battlefield.

- The mini-map is always oriented so that north is at the top.
- The arrowheads in faction colours show the position and facing of units on the battlefield.
- Selected units are always highlighted on the mini-map.
- The two blue lines show the current view onto the battlefield.
- The markers on the mini-map indicate if the unit is yours (green), the enemy's (red) or neutral (blue).
- The shadowed area at the edge of the mini-map is out of bounds during a battle. Units may only enter this part of the map if they are withdrawing from battle or routing.
- It is possible to issue movement orders using the mini-map.
- See [Giving Orders – Moving & Attacking](#) for more details.
- Drag-and-click on the mini-map to adjust its displayed view.

The other data and controls in this section of the panel are:

- You can zoom in and out of the mini-map using these **buttons** to change the map scale.

- Three buttons adjust the game speed. The "plus" and "minus" speed or slow down the action respectively. "Pause" stops the battle, and then becomes a "Play" button. The number shown is the game speed multiplier. Hit **CTRL + T** to toggle between standard and the fastest speed setting.

- The hourglass timer shows how much time remains before the battle ends. If you speed up the game, the timer speeds up, too.
- Just above the game speed controls the **power bar** shows the relative success or failure of your army in disposing of the enemy.

The Battle Cameras

The default for the battlefield camera in **Medieval II: Total War** is an RTS-style camera, which can be controlled by the mouse or keyboard controls (there is a second mode which will be discussed below):

- Moving the cursor to the edge of the screen alters the camera view. The cursor will change shape to show that the view is being altered. The view will **move** in the same direction as the side of the screen the cursor was moved to.
- The **mouse-wheel** (if your mouse has one) alters the camera height. The camera automatically **pitches** (tilts) downwards as its height is raised above the battlefield.
- The **/** and ***** keys (divide and multiply) on the numeric keypad also alter the camera height in the same fashion. The **-** and **+** keys (minus and plus) on the numeric keypad alter the camera tilt towards or away from the ground without altering its height.
- *Clicking* the center (third) button on the mouse **zooms** the camera viewpoint to look at the unit nearest the cursor while the button is held down. When the button is released the camera moves back to its previous position. (On some mice the mouse-wheel acts as the center button).
- The cursor arrow keys on the keyboard **track** the camera view left, right, forward and back without changing the viewing angle. *Click* on the ground and hold down the left or right arrow keys to **pan** the camera rapidly.
- The numeric keypad also changes the camera view. Check the key settings by pressing the **F1** key during battle for the camera controls.
- *Double-click* on a unit card to make the camera move to a position directly behind that unit. Pressing the **End key** also has the same effect.
- *Click* on the General's portrait in the control panel to move the camera to a position directly behind the General's bodyguard unit. If no General is present, there will be a Captain.
- The blue lines on the mini-map showing the visible area of the battlefield change as the camera position alters.
- The camera view can be changed when the game is paused.

Pressing the **Delete** key toggles the second camera mode – locking the view onto the selected unit(s). This will be familiar to players of earlier **Total War** titles. Virtually all camera controls are the same, with one important exception:

- The **up** and **down arrow keys** on the keyboard **track** the camera view forward and back without changing the viewing angle.
- The **left** and **right arrow keys** on the keyboard **pan** the camera (spin on its vertical axis) without changing its position.

Morale

Morale is an area where Total War differs from most other strategy games. Total War battles simulate the psychological factors that affect soldiers in some detail, and it's important to have some understanding of these factors. Not only will this keep your own army fighting longer, but convincing the enemy soldiers to run away is a much safer route to victory than having to actually kill them.

How your units react will depend on their particular training and disposition, so read the unit descriptions carefully.

- In general, peasants and militia are likely to run away at the first sign of trouble, whereas elite units such as knights will fight on in sticky situations.
- You can see each unit's morale on the unit tool tip. If it says **eager**, then everything is fine. If it says, "**wavering**" then the unit is likely to run away soon if you don't get them some help.

Routing

If your men become too scared or disheartened and their morale drops too low, they will

break and rout. The tool tip will show their action as "routing" and their morale state as "broken." They will attempt to exit the battle as quickly as possible and you will no longer be able to select them, or give them orders. It is easy to spot units that are routing, as their banner will flash white.

If they reach a place where they feel safe, then they may rally and return to your control. Units won't rally when an enemy is close by, so chasing after enemy units will ensure that they don't return to the fight.

Factors That Reduce Your Morale

Morale will naturally fall over the course of the battle as units take casualties and become tired. There are some specific things that directly affect morale as well:

- Losing your General.
- Being engaged in a losing melee battle.
- Being outnumbered.
- Being under fire from artillery, guns and flaming ammo.
- Having allies flee nearby. Note that routing can work like a chain reaction in the worst-case scenarios.
- Threats from enemies at the rear or flanks.
- Frightening foes such as elephant cavalry and savage natives that practice live sacrifices, etc.
- Being hit by a nauseous gas cloud from a cow carcass.

Factors That Increase Your Morale

The best ways to bolster morale are:

- Being engaged in a winning melee battle.
- Outnumbering the enemy.
- Keep your forces concentrated so that units can support each other.
- Keep your General near the action.
- Use your General's Rally ability.
- Position high morale units at the end of your line, as this is the most exposed position.

Ways to Attack the Enemy's Morale

Your aim is to clear the enemy from the field of battle, so be sure to use some of these techniques to get them routing:

- Concentrate assaults in one place so you can overwhelm certain enemy units.
- Concentrate missile fire on one unit to increase the chances of breaking it.
- Look for ways to get several enemy units routing at once to create a mass panic.
- Get units behind the enemy to undermine the morale of the whole force.
- If the chance arises, kill or rout the enemy General.

Fatigue

When your men are tired, they don't fight as well, and are more likely to run away. The fatigue level is shown on the unit tool tip. If a unit is exhausted, you should try and give it rest.

Things that affect fatigue include:

- Units get tired when they fight or shoot.
- Units get tired when they run a long distance, or climb a steep slope.
- If a unit has become tired, then leave it standing still for a while, and it will recover.
- Units do not become tired walking on flat ground, but nor do they recover.
- Troops used to the cooler climate of the north, or who are wearing heavy armor will tire out if fighting in the heat of the desert or the tropics.

Giving Orders - Moving and Attacking

Medieval II: Total War uses the same basic controls for both tasks: *click* to select, *right-click* on the battlefield for a destination or target.

- *Click* on a **unit** on the battlefield or a **unit card** in the **Review Panel** to select the unit.

- **Right-click** on the ground to have all the selected units move to that point.
- **Right-click** on an enemy unit to have all the units attack it – Note that the cursor will change based on the unit you have selected, and the way it will attack.
- You can review movement orders for all units by holding down the **spacebar** key. The colored chevrons will show all unit destinations for as long as the spacebar is held.
- When you order a tightly bunched selection of units to move to a point, they'll keep their formation, and move so that the center of the group of units is the point that you clicked. If they're widely spread, then they'll arrange themselves intelligently around the point you selected.
- The **cursor** will become green when targets are in range of a selected unit that uses a missile attack. The **cursor** will be red if the target is out of range.

Multiple Selections, Grouping, and Formations

Understanding groups and formations is important if you wish to be an effective commander. These features allow your units to work together more effectively, and let you control your army more easily. It's usually best to set up your groups and formations during the battle's deployment phase.

Selecting & Ordering Multiple Units

There are several ways you can select multiple units at once:

- Hold down the **CTRL** key when *clicking* on a unit or unit card. This will add it to those units already selected.
- *Click-and-drag* on the ground, and drag out a box to enclose several units.
- Use one of the shortcut keys to select all the units of a particular type. The default shortcuts are:
 - **CTRL + M** to select all missile units.
 - **CTRL + C** to select all cavalry units.
 - **CTRL + I** to select all non-missile infantry units.
 - **CTRL + B** to select all artillery units.
 - **CTRL + A** to select all units.

Once you have multiple units selected, you can order them all together in the same way that you'd order a single unit. This includes moving, attacking, and the various special order buttons.

Groups

When you have multiple units selected, you can easily turn them into a group by *clicking* the **Group** button on the control panel. Once you do this, you'll see that the unit cards rearrange themselves on the review panel, with a border around them and a convenient tab that you can use to select the group in future. There are several benefits to grouping your units.

- You can create a group with a specific number, by selecting the units you wish to group, then holding down **CTRL** and pressing the **number** you desire. You can alternatively hit the **G** key to group the currently selected units.
- It's easy to select them again by *clicking* their tab on the **Review Panel**. You can also select the group by pressing the number key that corresponds to the number on the group tab.
- To remove a unit from a group, select the unit, and *click* the **Group** button again.
- To split a group into two, select the units you wish to split off, *click* the **Group** button to remove them from the group, then *click* it again to form them into a new group.
- To add units to a group, you must reform it. Select the existing group, then hold down the control key and select the units or groups that you wish to add. *Click* the **Group** button or **CTRL** and a **number key** to form a new group with all these units.
- When grouped units move, they all move at the same speed, and attempt to maintain their formation.
- The group remembers the formation it was in when formed, making it easy to reform

again if the units have been dispersed.

- Groups can be given a preset formation, making it easy to organize your units.
- If you order a group to attack an enemy unit, the units in the group will intelligently assign themselves to attack surrounding enemy units too. A common situation that occurs in the game is when two lines face off against each other. If you group the units in your line, then *right-click* on the unit in the center of the enemy line, all your units will intelligently march off with the enemy unit facing them.
- The group may be placed under "AI assistance."

Once you've formed units into a group, you can still give orders to individual units within it, if you temporarily need them to do something different. Units always obey the last order that they've been given though, so whenever you issue an order to the group, this overrides any individual orders you've given units.

Using AI Assistance

You can place a group under "AI Assistance" (computer control) by selecting the group, and *clicking* the **"AI Assistance"** button on the **Control Panel**. The computer will now take care of controlling these units for you. You can give high-level instructions to the computer by selecting the group, then *clicking* on the place you'd like it to defend, or *clicking* on the enemy you'd like it to attack. If you don't give any orders, the group will defend the spot where it currently stands.

Using Formations

A "Formation" is an arrangement of units, where each unit type has a set position for the current formation. Knowing how to use formations makes keeping your forces in a certain shape quick and easy.

- **Create your own formations** – To create your own formation, arrange your units into the desired positions before assigning them as a group. The units in the group will always move back into that formation when you give it an order.
- **Using preset formations** – Once a group is selected, *click* on the **Group Formations** button to reveal a selection of 8 present formation buttons. *Clicking* on one of these will arrange the units into the formations as described by their tool tip. The units arrange themselves instantly in the deployment phase.
- **Formation stretching** - If you've assigned a preset formation, you can vary the width of the group, by *right-clicking* on the terrain, holding the mouse button down, and dragging out a line to define exactly where you'd like the group to go, and how spread out you'd like it to be.

Using Special Abilities

Some units have special capabilities that you can call upon in battle, ranging from actual attacks, through to unique formations and actions like trying to rally your allies.

- **Rally troops** – This ability is unique to Generals and gives a temporary morale boost to all nearby friendly units. This may stop wavering units from breaking, or encourage routing units to rally.
- **Sharpened stakes** – This ability allows missile units to place down a row of heavy wooden stakes in front of their current position during deployment only. This forms a defensive wall that is ideal for deterring cavalry charges.
- **Spear wall formation** – This ability allows a spear-wielding unit to form up a deadly wall of spikes that makes them extremely difficult to attack from the front. While in this formation, the unit cannot run and moves slowly.
- **Fire flaming ammo** – This ability allows units with missile weapons to set fire to their ammo, causing a drop in accuracy, but adding extra fire damage to shots that connect.
- **Fire exploding ammo** - Exploding shot is an advanced form of munitions that detonate on impact, creating a deadly hail of shrapnel, killing most troops caught in the blast.

- **Barrage fire** – Allows gunpowder artillery to fire many individual shots all in one attack.
- **Rotting cow carcass** – Loads a decaying bovine carcass into a trebuchet, which will create a cloud of nauseous gas. Units affected by the gas suffer a morale penalty.
- **Circle and shoot** – Causes missile cavalry units to ride in a circle as they attack the enemy, making their shots slightly less accurate, but also making them much more difficult to hit themselves.
- **Wedge formation** – Forms cavalry into a narrow wedge that is ideally suited to moving through enemy lines, rather than stopping to engage.
- **Schiltron formation** – Forms a spear/pike wielding unit into a circular formation, with all troops facing outwards. This is a useful defensive formation when outnumbered or surrounded.

Taking Prisoners

Whenever an enemy soldier that is routing is brought down by one of your men, the enemy is taken prisoner. Note that you only get to take prisoners if you are victorious, as the winning side is in a position to reclaim their men that were taken themselves.

Battle Results

When a battle ends, whatever the reason, a panel will appear giving you information about the result. The following details and controls are available here.

- Statistics about the battle you just had, whether you won or lost, and if it was a close battle or a slaughter.
- Click this **button** to exit the battle entirely.
- Click this **button** to save a replay of the battle that just took place so you can view it later to relive your more glorious moments.
- The option to save a replay does not occur in campaign battles.
- Click this **button** for more detailed information about the battle that just took place.

Dealing with Prisoners

If you were the victor, and thus the captor, you will have a decision about what to do with the prisoners you have taken in battle.

Ransom

Choosing to ransom asks the other faction to pay for the return of their troops, and possibly Generals or even **Faction Leaders** or Heirs. This is considered common and acceptable, neither noble nor nasty.

Release

Choosing to release lets these men go after the battle, showing mercy. This is considered to be a rather chivalrous thing to do, although letting the enemy go is not always wise.

Execute

Choosing to execute the prisoners is quite obviously a dreadful thing to do, but if you can't afford for the enemy to be regaining troops, this can be the best course of action.

Things to know about how you deal with prisoners:

- The faction that actually captured the prisoners is the one that decides to ransom, execute or release them.
- The only decision the faction that lost the battle makes is whether or not it pays the ransom, should one be offered.
- Generals, Faction Leaders and Faction Heirs are worth far more money than standard units in ransom calculations.

- Declining to pay ransoms when you can afford it can be considered somewhat dreadful, while choosing to pay a large ransom is considered quite chivalrous.
- If you can't actually afford a ransom, nobody will think worse of you for not paying.

SIEGES & SIEGE BATTLES

Sieges occur when an army assaults a settlement or attempts to break into a fort. They have much in common with field battles, but with the important qualification that one side is behind a set of defenses. All the normal rules of the battlefield apply to sieges; orders for attacks and movement are issued in the normal fashion. There are, however, extra conditions that apply during sieges, and new weapons and tactics for both the attacker and defender to consider.

Launching a Siege

When you attack a settlement with an army, you are launching a siege and will receive a special **Siege Details Scroll** that comes with options not found in field battles.

- Any defenses including walls or improved towers will be displayed here to show what you're up against.
- The number of turns that the settlement can last before having to surrender from starvation is shown below the defenses.
- Click on this **button** to have your army withdraw, calling off the siege.
- Click on this **button** to launch your attack now with the forces and equipment you have now.

- Click on these **buttons** to begin building the siege equipment shown on them: Ladders, Rams and Siege Towers. Items selected will appear in the construction queue below, and points will be deducted from the army's build points total.
- Click on this **button** to have your siege army maintain its position, holding the siege. This can be used to build more siege equipment, wait for reinforcements, or even attempt to starve out the defenders so that they will surrender.

Victory in Siege Battles

The victory conditions of a siege battle are different to that of a field battle. You can still win by killing all of your opponent's troops or routing them from the battlefield, but controlling the settlement is actually what a siege battle is about.

- There is a square in the center of every settlement, indicating which faction the square, and thus the settlement belongs to.
- The besieging army must have at least one of its units in the square without any defenders in the square to actually take control of it.
- When the besieging army takes control of the square a timer will appear, counting down the time remaining before they have fully taken control of the settlement itself. If the remaining defenders do not reclaim the square within that time limit, they lose the battle, and the settlement.

Using Siege Equipment & Artillery

There are two basic types of machines that you can employ in siege battles – artillery units that are capable of attacking walls and structures, and actual siege equipment. Artillery can target walls, defenses and buildings like any other unit in battle. Siege equipment however works quite differently depending on the equipment being used:

- A unit equipped with a **ram** can be sent against a **gateway** or **wooden wall**. The cursor will change to show a suitable target gate for the ram. The ram affords the men using it some protection from missile fire.
- A unit equipped with **ladders** can be sent to scale a suitable stretch of **wall** (not a tower). The cursor will change to show a suitable length of wall to

Capturing Walls

Wooden palisades serve only as a barrier to keep out attackers. However, settlements with proper walls men can walk upon can be actively fought over by the attackers and defenders:

- Any infantry (i.e. non-mounted) unit can be ordered to move to the top of a wall, or ordered to attack defenders on a wall.
- If an attacking unit is in sole possession of a wall, gatehouse or tower it will capture the structure.
- The defenders can recapture walls.

Defending in Siege Battles

Even though being under siege is not a good thing, having the advantage of walls and defensive structures is. When armies are evenly matched, the defender actually has a huge advantage, as it is not they that need to take a risk – it is up to the attacker to find a way in.

Sally Battles

Sally battles occur when the settlement garrison emerge from behind their walls to drive off their besiegers. In the case of a sally battle the **garrison** are always treated as the battle attackers and the besiegers as the battle defenders even though, in strategic terms, the situation is the other way round.

The besiegers will appear on the battlefield outside the settlement, and they will not have a chance to position their troops for the battle. For the attackers (sallying out) to win, they must kill or drive off all the defenders (the besieging army).

Using Defensive Fortifications

Defensive fortifications need to be manned in order to be activated – It is not enough to simply build the fortifications in the first place.

- If a unit of the defending faction is near a tower or gatehouse, the defensive missiles installed there will fire on enemy units that come into their firing range.
- It is possible for the attacker to take control of fortifications once they gain control of the central square.

HISTORICAL BATTLES

Historical Battles are battles taken from history that are brought to life in **Medieval II: Total War**. These battles come as special scenarios where you play as one of the sides in an epic battle where you have to make the most of the situation at hand. Being based on the actual historical events, history itself has shown us a winning tactic in these scenarios – apply those tactics and you should prove victorious!

Playing a Historical Battle

To begin playing a Single Player Historical Battle, go to the Single Player Menu and then select Historical Battles to see the list of currently available battles to play. Multiplayer Historical Battles involve the same process as below, except that the “Select Army” screen includes information to show which player is controlling which army.

- Click on the battles listed under “Select Battle.” This will bring up the basic details of the battle in question.
- Click on the “Next” button in the bottom right to go to the “Select Army” screen.
- Mouse-over the faction shields to see which armies are playable in this battle. Click on their shields to see that army’s units – the last selectable army you click on will pulse with a glow.
- When you are ready to begin the battle, click on the “Next/Start” button.

Winning a Historical Battle

The rules of Historical Battles are only slightly different to that of any other field battle or siege:

- The deployment is always pre-determined. Part of the challenge with these battles is winning from a poor starting position.
- Reinforcements may appear to arrive in a manner that looks unfamiliar, so keep an eye out for them – They may be close, but well hidden.

CUSTOM BATTLES

Custom Battles give the player the ability to fine-tune a battle scenario to their liking, for both Single Player and in **Multiplayer Battles**. To start a Custom Battle, click on “Single Player” in the **Main Menu**, then click on “Custom Battle.” There are three things to set before your Custom Battle can begin: the conditions, the teams and the armies.

Choosing Conditions Screen

There are a wide variety of conditions that can be adjusted to tailor the battlefield to your needs. Once you are done, click on the “Next” button to continue to the **Customize Battle Screen**.

Custom Battle Conditions Settings:

- **Choose Battle.** This selects a battle location. Locations marked with a cross before the name includes a specially defined settlement. Locations without rivers can have settlements added to them.
- **Load Previous Battles.** Click on the “Load Previous Battles” button to quickly recall the settings of a previously fought battle.
- **Game Type.** Chooses between victory conditions of “Last man standing” (survive to win), “Scored resolution” (score based on units involved and combat results) for field battles. Siege Battles will always be set to “Siege Assault.”
- **Season, Weather & Time of Day.** These adjust the basic season, weather and time of day for the battle. Some weather and time settings have an effect on how combat works.
- **Time Limit.** Allows varying time limits, or a “No time limit” battle.
- **Level.** Allows varying settlement levels to be included, to play the battle as a siege. Set this to “None” for a field battle.
- **Culture.** Allows the settlement culture to be set to Northern European, Southern European, Mesoamerican or Middle Eastern.
- **Defences.** Allows for the inclusion of improved towers in siege battles.
- **Difficulty.** Sets the battle difficulty – the higher the difficulty, the more capable and dangerous your CPU opponent will be.
- **Period.** Works as a unit filter. If set to “All,” all units are available. “Early,” “Late” and “High” all refer to a medieval time period. Late period units are more advanced, early period units are more primitive.

Customize Battle Screen

This is the screen where the teams are set up for battle. You can have up to 8 factions and 4 teams in one battle using the controls on screen as follows:

- Team details are shown down the left. Aside from seeing which player is in which team, you can also adjust the amount of florins that team can use to spend on units, and whether or not that team plays as the attacker or defender.
- Player details are shown in the middle of the screen. Clicking on the Faction shield or player name area selects that player – Then you can select a faction for that player by clicking on a faction shield in the “Factions” area at the right of the screen.
- These shields show which team that player is on. Click on the arrows either side to change teams.
- Clicking on this button will remove that player from the game, emptying that player slot.
- Click on the “Next” button in the bottom-right corner to continue to unit selection.

Select Units Screen

This screen is where you select the individual units that will be in each army. There are certain things that will limit what you can select, or affect the costs of the units:

- **Faction and Florins Left** show the currently selected faction, and its remaining budget for unit selection and upgrades – This is not the team budget. As units and unit upgrades are selected, this value will drop accordingly.
- The area in the center of the screen is where teams and factions are selected. Click on a **faction shield** to change armies and select another force. The army currently being selected has a glowing faction shield. The panel below the shields shows the units that have been added to this army.
- The area to the right of the screen shows the available units for that faction. Mousing-over each card shows information about that unit both in the displays above, and on a tooltip. The number on the unit card is the number of men in the unit.
- Click on an available unit in the right area to **add** it to the army. The unit cost is immediately deducted from the available money.
 - The **first** unit selected is always the army leader.
 - Right-click on a unit in the central area to **remove** it from the army. The unit cost is credited to the available budget.
 - You can drag-and-drop units within the lower army box. You can drag-and-drop a unit into the first place in your army (the upper left hand box) to make it the commander's unit. This can also help the organization of your army when you have a few identical units.
 - If you recruit more than four of one unit type, that unit will begin to cost more and more as you continue to recruit more of them.
- You can **upgrade** some units in an army. This costs money for every improvement that you make. Not all units can be upgraded:
 - Click on a unit in the army to select it – not a right-click, this removes the unit from the army!

- Click on the arrowheads next to the chevrons to change the unit's **experience** rating. The more chevrons, the greater the unit's experience. A grey chevron indicates no experience.
- Click on the arrowheads next to the sword to upgrade the unit's weapons. Not all

units can have their weapons upgraded.

- Click on the arrowheads next to the shield to change the unit's armor quality; grey indicates standard armor, while bronze, silver and gold indicate 1-3 levels of increased quality respectively. Not all units are capable of receiving armor upgrades.

- In siege battles you can give siege equipment to the attacking army:

Click on the arrowheads below each of the siege equipment items to add them to the attacking army.

- Note that these have no cost at all – They are useless without units.

- Click on this button to **clear the selected units** in an army and start again.

- Click on this button to make the computer select an army for you. It will do its best to spend your budget as efficiently as possible and create as flexible a force as possible. You can make adjustments to the CPU's suggested force.

- Click on the “**Load & Save Battle**” button to save this custom battle set up, or load a Custom Battle you created earlier.

- Click on the “**Load & Save Army**” button to save the current army's unit and upgrade set up, or load an army you set up earlier.

MULTIPLAYER BATTLES

Multiplayer games allow you to battle against other people, either over the Internet or across a Local Area Network (LAN). You can create Multiplayer Custom Battles, or fight one of the special Historical or Balanced Multiplayer battles that have been included with **Medieval II: Total War**.

Setting Up a Multiplayer Battle

To begin playing Multiplayer battles, click on “Multiplayer” in the Main Menu and then go through the following steps:

- **Enter your details** – Include your player name that other players will see in game, your email address and GameSpy password (only needed for online play).
- **Select Online or LAN** – Choose between online play over the Internet via GameSpy or a Local Area Network game. Once you click on one, you will then be taken to the multiplayer lobby.

The Multiplayer Lobby

The lobby is the “hub” of Multiplayer gaming where players meet before the battle. The screen lists games being played and allows you to sort them by several different criteria. You can also host and join games from here.

- Click on any game in the central display area to select it. Mousing-over it will give additional information about the conditions and settings.
- If a game is selected, clicking on the “**Join Game**” button will take you into the relevant team or **Unit Selection screen**, depending on the battle type (see **Hosting a Multiplayer Game** below).
- Click on any of the buttons at the top of the lobby to sort all the games by the information in that column.

Using Chat

At the bottom of all Multiplayer lobby screens is the chat area, with messages being displayed on the left, and the people chatting listed on the right. You can type a message and it will appear on screen for everyone in the lobby. There is also a “Private” chat mode, allowing you to send messages to specific players.

- To use the chat filter toggles, *click* on a player's name you wish to filter or ignore, then *click* on the appropriate toggle button.
- *Click* to toggle between public and private chat modes. This lets you talk to one or more people aside from those in the lobby.
- *Click* to toggle the selected player(s) as a private chat recipient. Their name will be marked with an icon.
- *Click* to toggle filtering of all messages from the selected player(s).
- *Click* to toggle between blocking or unblocking the selected player(s) from joining your game.
- *Click* to toggle directing all your messages to team members only on or off.
- Toggle to filter lobby chat
- *Click* on this to maximize the chat window for long chat sessions. *Click* on it again to minimize the chat window.

Hosting a Multiplayer Game

Hosting a Multiplayer game is almost identical to playing either a Custom Battle or Historical Battle depending on game type. To host a multiplayer game, go to the Multiplayer lobby, *click* on the “**Host Game**” button, then proceed through the following steps:

- **Game Name** – *Click* on the “Game Name” display and enter a name for the game to be shown in the Lobby.
- **Set Players & Password** – Set the maximum number of players, and enter a password if you wish to set up a private game.
- **Unit Scale** – You may wish to reduce this if one or more of the players has an older PC or graphics hardware.
- **Custom, Historical or Balanced** – *Click* on the type of multiplayer battle you wish to host.
- **Selecting teams, armies and units** – Subsequent screens from here involve simply choosing teams, using the same basic setup screens as you would have in a single player Custom Battle or Historical Battle – except with options to lock any vacant slots.

A WORD OF RESPECT TO THE FAITHFUL

We here at the Creative Assembly want to make it clear from the outset that we are aware that certain game elements and events within **Medieval II: Total War** may take liberties with how the different religions are handled. The way some things in the game are described may not adhere to the mandates of those faiths. This is because **Medieval II: Total War** is not a game about religion; it is simply a strategy wargame that represents an effect of religion.

No one religion is better than another in **Medieval II: Total War**, and the effects of religion work the same for all faiths within the game system. We sincerely apologize to anyone who finds the portrayal of their faith offensive; it was never our intention.

END USER LICENSE AGREEMENT

PLEASE READ THE FOLLOWING END USER LICENSE AGREEMENT (“AGREEMENT”) BEFORE INSTALLING MEDIEVAL II: TOTAL WAR, (THE “GAME SOFTWARE”). BY INSTALLING, COPYING, AND/OR OTHERWISE USING THE GAME SOFTWARE, YOU AGREE TO BE BOUND BY THE TERMS OF THIS AGREEMENT AS SET FORTH BY SEGA CORPORATION OF 1-2-12, HANEDA, OHTA-KU, TOKYO, 144-8531 JAPAN AND ITS AFFILIATED COMPANIES (COLLECTIVELY, “SEGA”).

IF YOU AGREE TO THE TERMS SET FORTH IN THIS AGREEMENT, select “Yes” to install the Game Software and to indicate your acceptance of these terms and your understanding of the conditions of use of the Game Software.

IF YOU DO NOT AGREE TO THE TERMS SET FORTH IN THIS AGREEMENT, select “No” and Sega shall not grant to you the License (defined below) to the Game Software. Sega requests that you either return the unused Game Software to the place of purchase or contact one of the customer service centers advertised in the information accompanying the Game Software. Please note that there may be a charge for the telephone call to the customer service center.

LIMITED USE LICENSE

The term “Game Software” includes the software included in this video game, the associated media, any software associated with the online mode of the video game, any printed materials, any online or electronic documentation, and any and all copies of such software and materials. Sega grants to you the non-exclusive, non-transferable, limited right and license to install and use one (1) copy of the Game Software solely for your personal use (the “License”). All rights not specifically granted under this License are hereby reserved by Sega and, as applicable, by its licensors. The Game Software is licensed to you, not sold. This License does not give you any title or ownership in the Game Software, and should not be construed as a sale or transfer of any intellectual property rights to the Game Software.

OWNERSHIP

You agree and acknowledge that all title, ownership rights, and intellectual property rights connected with the Game Software and any and all copies thereof (including but not limited to any derivative works, titles, computer code, themes, objects, characters, character names, stories, dialogs, catch phrases, locations, concepts, artwork, animation, sounds, musical compositions, audio-visual effects, text, methods of operation, moral rights, “applets” incorporated into the Game Software, and any related documentation) are owned by Sega or its licensors.

The Game Software is protected by the copyright laws of the United States, international copyright treaties and conventions, and other laws. All rights are reserved. The Game Software contains certain licensed materials, and Sega and Sega's licensors may protect their rights in the event of any violation of this Agreement. You agree not to remove, disable or circumvent any proprietary notices or labels contained on or within the Game Software.

LICENSE CONDITIONS

You agree to only use the Game Software, or any part of it, in a manner that is consistent with this License and you SHALL NOT:

- (a) without written permission from Sega, exploit the Game Software or any of its parts commercially, including but not limited to use at a cyber (Internet) café, computer gaming center or any other location-based site;
- (b) without a separate, additional license, use the Game Software or permit the use of the Game Software, on more than one computer, game console, handheld device or PDA at the same time;
- (c) use the Game Software, or permit use of the Game Software, in a network, multi-user arrangement or remote access arrangement, including any online use, except as otherwise explicitly permitted by Sega in writing;
- (d) make copies of the Game Software or any part thereof, except that you may make one (1) copy of the Game Software for backup or archival purposes, or make copies of the materials accompanying the Game Software;
- (e) sell, rent, lease, license, distribute or otherwise transfer this Game Software or any copies without the express prior written consent of Sega;
- (f) reverse engineer, derive source code, modify, decompile, disassemble, or create derivative works of the Game Software, in whole or in part (except as the applicable law expressly permits, in which case all and any modifications, adaptations, improvements, etc. shall belong to, vest in and be the exclusive property of Sega and/or its licensors on creation, in any event);

(g) remove, disable or circumvent any security protections, proprietary notices or labels contained on or within the Game Software;

(h) export or re-export the Game Software or any copy or adaptation in violation of any applicable laws or regulations; or

(i) create data or executable programs that mimic data or functionality in the Game Software.

Furthermore, you agree that you shall abide by the safety information, maintenance instructions or other relevant notices contained in the manual that is included with the Game Software.

LIMITATIONS ON DAMAGES

The Limited Warranty does not apply if the defects have been caused by your negligence, accident, unreasonable use, modification, tampering, or any other causes not related to defective materials or manufacturing workmanship, and Sega and its licensors shall not be held liable for any damage, injury or loss if caused as a result of any of these reasons. However, Sega and its licensors do not seek to exclude or limit their liability for personal injury arising from their negligence. The Limited Warranty does not apply to used Game Software or to Game Software acquired through private transactions between individuals or purchased from online auction sites.

In no event shall Sega or its licensors be liable for special, incidental, or consequential damages resulting from possession, use or malfunction of the Game Software, including without limitation the risks connected with lost profit, damage to property, lost data, loss of goodwill, console, computer or handheld device failure, errors and lost business or other information as a result of possession, use or malfunction of the Game Software, or personal injuries, even if Sega has been advised of the possibility of such loss or damages. Furthermore, in no event shall Sega or its licensors be liable for consequential or incidental damages resulting from the breach of any express or implied warranties. Sega's total liability shall not exceed the actual price paid for the Game Software.

TERMINATION

Without prejudice to any other rights of Sega, this License shall terminate automatically if you fail to comply with its terms and conditions. In such event, you must destroy all copies of the Game Software.

INJUNCTION

Because Sega would be irreparably damaged if the terms of this Agreement were not specifically enforced, you agree that Sega shall be entitled, without bond or other security or proof of damages, to take such action as may be required, including seeking an injunction and other equitable remedies, in addition to any other remedies available to it under the applicable law.

INDEMNITY

You agree to indemnify, defend and hold Sega, its partners, affiliates, contractors, licensors, officers, directors, employees, and agents harmless from all claims, damages, costs and expenses (including legal expenses) arising directly or indirectly from your acts or omissions to act in using the Game Software pursuant to the terms of this License.

MISCELLANEOUS

This Agreement represents the complete agreement between you and Sega concerning the License, in relation to the use of the Game Software, and supersedes all prior agreements and representations, warranties or understandings between you and Sega (whether negligently or innocently made but excluding those made fraudulently), regarding the same subject matter. Sega reserves the right to amend this Agreement at any time, at its sole discretion. If any provision of this Agreement is held to be unenforceable for any reason, such provision shall be reformed only to the extent necessary to make it enforceable, and the remaining provisions of this Agreement shall remain in full force and not be affected.

This Agreement shall be construed under California law as such law is applied to agreements between California residents entered into and to be performed within California, except as governed by federal law, and you consent to the exclusive jurisdiction of the state and federal courts in San Francisco, California.

If you have any questions concerning this Agreement or the License contained therein, you may contact Sega at 650 Townsend Street, Suite 650, San Francisco, CA 94103, USA, Attn. Legal Department.

LIMITED WARRANTY:

SEGA of America, Inc. warrants to the original consumer purchaser that the game disc or cartridge shall be free from defects in material and workmanship for a period of 90-days from the original date of purchase. If a defect covered by this limited warranty occurs during this 90-day warranty period, the defective game disc or cartridge will be replaced free of charge. This limited warranty does not apply if the defects have been caused by negligence, accident, unreasonable use, modification, tampering, or any other causes not related to defective materials or manufacturing workmanship. This limited warranty does not apply to used software or to software acquired through private transactions between individuals or purchased from online auction sites. Please retain the original, or a photocopy, of your dated sales receipt to establish the date of purchase for in-warranty replacement. For replacement, return the product, with its original packaging and receipt, to the retailer from which the software was originally purchased. In the event that you cannot obtain a replacement from the retailer, please contact Sega to obtain support.

Obtaining technical support/service

To receive additional support, including troubleshooting assistance, please contact Sega at:

- Website: www.sega.com/support
- E-mail: support@sega.com
- Telephone: 1-800-USA-SEGA

LIMITATIONS ON WARRANTY

ANY APPLICABLE IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY LIMITED TO 90 DAYS FROM THE DATE OF PURCHASE AND ARE SUBJECT TO THE CONDITIONS SET FORTH HEREIN. IN NO EVENT SHALL SEGA OF AMERICA, INC., BE LIABLE FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES RESULTING FROM THE BREACH OF ANY EXPRESS OR IMPLIED WARRANTIES. THE PROVISIONS OF THIS LIMITED WARRANTY ARE VALID IN THE UNITED STATES AND CANADA ONLY. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, OR EXCLUSION OF CONSEQUENTIAL OR INCIDENTAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU. THIS WARRANTY PROVIDES YOU WITH SPECIFIC LEGAL RIGHTS. YOU MAY HAVE OTHER RIGHTS THAT VARY FROM STATE TO STATE.
